Intelliguard® RFID Solutions Ecosystem:

Kit and Tray Management: Faster, Safer Replenishment in Seconds

The Intelliguard® Kit and Tray Management System automates, validates and enables medication replenishment processes and is proven to reduce staff processing time and errors. Each task is performed with 100% accuracy—nothing missing, nothing expired.

Inventory Optimization for the OR: Secure Access, Simple Workflow

The Intelliguard® Linked Visibility Inventory System™ combines secure in-room access to medications and narcotics with true automated data collection. Anesthesiologists simply open a drawer, use what's needed and close the drawer, while LVIS™ relays precise inventory details to the pharmacy in real time.

Controlled Temperature Cabinets: Different Sizes. All Smart.

Featuring real-time remote visibility enterprise-wide and 24/7 temperature monitoring, the Intelliguard® Inventory Management System offers optimal medication management for high value and critical dose drugs. Inventory details update automatically each time the cabinet is accessed, providing reliable usage data to optimize purchasing, eliminate waste and avoid stock outs, and the security needed to enable caregiver access when and where it's needed.
