

Efficient and effective.

Breast Milk Storage... where and when you need it

Proper storage and handling can significantly reduce risk of infection and is essential to maintain the safety and efficacy of expressed breast milk (EBM). The MLR102 provides a stable, uniform environment ensuring that all space inside of the refrigerator is safe for EBM storage.

- » Forced-air refrigeration for a stable storage environment
- » Quick recovery after door openings, which are common with newborn feedings
- » Near silent operation ensures mothers and babies have a quiet, peaceful environment
- » Minimal heat output does not affect room temperature, keeping mothers and babies comfortable
