

The DOSIS System

Integrate

DOSIS will integrate with virtually any pharmacy management software on the market.

Automate

Filled, sealed and labeled blister cards

We'd love to give you a demonstration!

Seeing is believing with the DOSIS System. We can give you a full demo of a working system so you can see for yourself the value of DOSIS workflow.

Industry-Leading Autonomous Workflow System

DOSIS units link together based on your volume. With real-work production up to 20k cards per month per unit, the only question is, "how many cards are you producing?". DOSIS will handle it!

www.dosis.com

Quick Facts

- Each DOSIS unit can confidently produce 10k cards per month with 1 hour of manned attention per shift in almost any pharmacy workflow. This is 3x faster than manual filling by an experienced tech. In many pharmacies, DOSIS units each produce 15k to 20k cards per month.
- DOSIS is a turnkey workflow solution. From integration to automation to printing and adherence, we will scale with your business!
- Many DOSIS pharmacies have automated more than 75% of their production with some DOSIS systems producing over 200k patient-labeled cards per month.
- DOSIS units are small enough to fit through standard doorways and plug into a normal 110v power outlet. No need to remodel your pharmacy to fit oversized equipment. Our units are 25"D x 43"W x 79"H.
- Units act independently within each system which means all working units remain active during troubleshooting.
- DOSIS systems produce more than 2 million blister cards every month in pharmacies large and small!
- Add-on Features such as time-pass printing, pre-pack manager, and directional printing make tremendous impact on efficiency beyond the automation itself.
