

TEMPERATURE INTELLIGENCE®

Monitor your medication onsite and in transit

Accurate temperature and humidity monitoring for home infusion providers

Keeping infusion therapies at the right temperature is critical for quality patient care. In your facility, our electronic sensors monitor temperature and humidity in refrigerators, freezers and storage areas. Mobile solutions allow you to continue monitoring temperatures in transit. Plus, the information gathered can help with accreditation and compliance.

Put Temptime's more than 30 years of experience helping pharmacies of all types and sizes monitor medication to work for you:
