

SAFETY

EFFICIENCY

Find us at the Intersection of Patient Safety and Pharmacy Efficiency

Hospital pharmacies juggle many critical tasks. The top priority is patient safety. Operational efficiency is important too; institutions seek to provide bar coded medications while minimizing packaging tasks to enable BCMA.

American Health Packaging can support you at this "key intersection" of patient safety and operational efficiency. *The AHP line is the fastest growing in the industry.* And we offer many exclusive items to eliminate pharmacy packaging on lower-volume items.

Easy-to-read bar codes ensure both accurate and easy scanning. In addition, our cartons feature color-coded labels to more easily distinguish between similar items on the pharmacy shelf.

Our latest product introductions include **Morphine Sulfate ER CII**, **Bisoprolol Fumarate** and **Sotalol HCl tablets**.
