## Company Background

Fulcrum Inc. was established in 2000 when it acquired Torbal™, and the Torsion balance prescription line. Torbal™ dates back to the 1800's when it became famous for its superior weighing mechanisms, which were based on the Torsion design. During the 20th Century, the Torbal DRX mechanical model became the prescription balance of choice for pharmacies throughout the United States. Today, the DRX success continues with some of the most advanced digital pill counting and prescription scales available on the market. Torbal's DRX line is designed and dedicated solely to compounding and pill counting applications. Our goal and focus is to provide pharmacies with high quality pill counting scales that are very fast, accurate, affordable, and offer an outstanding ROI. All DRX pharmacy scales are NTEP - certified for pill counting and prescription use in all 50 states. No matter which DRX pill counter or prescription scale you choose, you will always receive outstanding quality and support – You can count on that.

## Product Overview

The DRX 5SX Pill Counting System is the latest addition to Torbal's line of pill counters and prescription scales. The system is loaded with over 30 features and functions which accelerate pill counting speed, performance, and productivity. The DRX-5SX pill counting system incorporates an all solid state embedded server which can connect up to 30 pill counting DRX - 500sx workstations. Pill Counting stations connect to the Torbal server wirelessly, through your local network, or remotely via the internet. All pill counting and Rx Verification transactions are monitored and logged by the server. The system generates valuable reports and graphs. It also sends automatic e-mail alerts to the administrators in case of user caused miscounts or failed verifications. In addition, the server hosts the entire National Drug Directory; it allows administrators to manage user permissions; it provides all essential networking configuration parameters; and much more. A count of 100 pills can be performed in less than 20 seconds. Pills are dispensed directly into the vial, thereby eliminating cross-contamination. Pill counting stations do not require cleaning, calibration, or any disassembly.

## Ordering Information

To order please visit [www.fulcruminc.net](http://www.fulcruminc.net) or call (866) 473-6900. Mention "20 Ways" when ordering and receive an instant \$50 discount off your purchase.

## Testimonials

*"These scales are one of the best pieces of equipment we have had in our pharmacy. They improve our accuracy in count and drug selection. Because they provide this, we are able to train new techs more quickly. We are also less mentally tired from not counting pills all day, which also helps with accuracy. I believe these scales are well worth the price."*

— Rick C. R.Ph. Cadiz, Kentucky

*"The Torbal DRX-4C Scale was very user friendly. As a matter of fact, we purchased a second one within a few months of the first purchase. The set up was easy and there was almost no maintenance at all. It has helped us to increase our efficiency and customer satisfaction by keeping up the turn-around time. I am very happy with the product and service provided by the company. If you are looking for a digital scale, I would recommend Torbal DRX-4C scale anytime."*

— Dr. Samuel H. San Francisco, California

## Additional Product Lines

Through its Torbal™ trademark, Fulcrum Inc. offers nearly 100 different scales and balances. The DRX pharmacy line consists of over ten prescription models, which includes the DRX-4 series - one of the most affordable and durable pharmacy scales available on the market. All DRX prescription scales are built with high quality electromagnetic force restoration load-cells, and a rugged die-cast metal housing which guarantees a long operating life.
