Company Background

Pharmacy Automation Supplies (PAS) has been using our manufacturing capabilities to support pharmacies for over 100 years. We began as a small local print manufacturer addressing the label and bag needs of a few regional pharmacies but have grown to one of the largest and most relied upon suppliers in the country. This growth is a result of our dedication to competitive pricing, reputation for quality, consistent industry leading turnaround times, and focus on adapting to the constantly changing needs of all the unique and dynamic segments of pharmacy (including Retail, LTC, Hospital, Specialty, Central Fill, Institutional, Nuclear, and many more). We know our products are counted on to perform in the most demanding pharmacy environments every day and hold ourselves to the same high standards of accuracy, consistency, and execution that pharmacies themselves do.

Our state of the art manufacturing and distribution facilities feature 20 high speed flexographic printing presses, PVC blister thermoforming machines, an in-house art and graphics department, plate manufacturing, inside sales division, customer service, and over 30,000 square feet of warehouse space devoted to addressing the needs of pharmacies. Having all our departments in such close proximity allows PAS the unique capability to collaborate between all facets of the company to offer comprehensive and unprecedented levels of service and responsiveness to customer demand. We're honored to count among our customers pharmacies ranging from specialized compounding facilities filling 25 scripts per day to national chains and heavily automated mail order facilities filling tens of thousands of prescriptions daily.

Why PAS?

In what's become an increasingly competitive marketplace Pharmacy Automation Supplies recognizes that reducing costs on supplies is essential to the long term success of all pharmacies. PAS's goal is to help your pharmacy save time and money with our high volume-low margin business model and by being the only supplier needed for the most frequently used packaging consumables in your daily operations.

With our short and long run custom manufacturing capabilities on pharmacy labels, prescription bags, and blister cards, PAS can help pharmacies of all sizes and volumes achieve branding consistent with how they want to market/promote the most visible parts of the prescription to patients. Through continued investments in tooling & machinery we continue to demonstrate that our efficiencies and run speeds allow us to set industry pricing without ever sacrificing the quality and lead times that have fueled our growth over the last 100 years.

In addition to our print capabilities, and in response to repeated customer requests over the years, we've leveraged our warehouse space to provide a one stop shop and wholesale pricing on other commonly used products in the industry. While we're constantly adding new products in response to changes in the industry our most popular warehoused products include: Authentic Lexmark toners, thermal transfer ribbons, and strip/pouch packaging supplies allowing many pharmacies to get all the most frequently used consumables for their pharmacy from a single source.
