Company Background

A commitment to patients, safety, and quality. For over 35 years, we have been an industry-leading provider for patient-specific compounded sterile medications in renal dialysis and targeted drug delivery. We have leveraged our expertise, which we have built over the years, and worked hand-in-hand with hospital pharmacy leaders across the nation to gather insights on their concerns and needs. Based on these insights, we have designed and built a separate state-of-the-art, sterile compounding facility located in the same corporate park in Boothwyn, PA. Our dedicated 503B facility now enables us to provide non-patient-specific compounded sterile preparations to hospitals and other institutional pharmacies. It's registered with the U.S. Food and Drug Administration (FDA) as a Human Drug Outsourcing Facility under Section 503B of the Federal Food, Drug, and Cosmetic Act and has been inspected for compliance with that agency's stringent current Good Manufacturing Practice (cGMP) in both its design and operation. Additionally, through the insight we gathered from industry experts, we have developed and patented innovative products that change the way sterile preparations are managed and prepared. We have built our 503B facility and our products with *Quality and Safety by Design*.

Product Overview

Our Snap-N-Go® and Dilute-N-Go® products reduce the time it takes for pharmacists, technicians, and nurses to compound and administer drugs by reducing >85% of the manual error prone steps. Pentec Health's sterile compounding solutions enable hospital pharmacies to combine the control of insourcing with the flexibility of outsourcing. Snap-N-Go and Dilute-N-Go, our Omnisourcing solutions, make compounding safer, faster, and more precise while helping pharmacy and nursing staffs maintain control of patient administered medication.

Features & Options

Omnisourcing solutions improve compounding by enabling your hospital to:

1. Increase the use of existing technologies while improving efficiencies of existing workflows and processes.
2. Minimize human manipulations during compounding to maintain a final product's sterility and accuracy.

3. Maximize storage and security by deploying products in automated dispensing cabinets and utilizing barcoding technology from the pharmacy to patient bedside.

Product Specifications

Snap-N-Go products are concentrated, sterile solutions that come in single-dose vials. Each vial delivers a precise dose or desired concentration, that is not available commercially, when introduced into a diluent bag of choice. In the forward positions, the vials can be stored in automated dispensing machines (ADMs) for rapid retrieval, dose tracking, and subsequent administration to a patient by a nurse utilizing a standard vial-to-bag adaptor/activation process.

Dilute-N-Go products are concentrated, sterile solutions that come in single-use syringes. Each syringe delivers a precise dose or desired concentration, not commercially available, when its contents are introduced into a diluent bag of choice. Dilute-N-Go products reduce the number of error-prone steps and the time associated with manual compounding by up to 85%.

For added safety, each Snap-N-Go vial and Dilute-N-Go syringe is barcoded and includes GS1 barcode for track and trace and TALLman lettering to distinguish sound-alike, look-alike drugs from one another to prevent medication errors.

We proactively provide a certificate of analysis and certificate of conformity detailing each product's purity, potency, sterility, and stability prior to receipt of the product.

Testimonial

"If your Snap-N-Go norepinephrine 8 mg is docked in my hood but not activated, that means I can get about 30 days instead of 24 hours and I don't have to track down an amber bag? That's just phenomenal!"

— DOP at Large Health System

Awards & Recognition

■ Snap-N-Go and Dilute-N-Go have received the following accolades:

- Finalist: 2017 Health Trust Innovation Summit: Innovation of the Year
- Finalist: 2018 Process Excellence Network Awards: Best Project Contributing to Customer Excellence
- Finalist 2018 and Nominee 2017 Premier GPO: Innovation of the Year

GPO Affiliations

We currently have GPO contracts with Intalere, ROi, and PDM Healthcare and are working with others to finalize contracts.
