### Company Background

AmerisourceBergen Technology Group (ABTG) is a business of AmerisourceBergen Drug Corporation and has been a leader in the pharmacy automation industry for nearly 20 years. From small community pharmacies dispensing a few dozen prescriptions per shift to multi-facility health systems supporting thousands of lives, ABTG has technology solutions that will help increase patient safety, streamline medication management processes and control costs. The ultimate goal is to provide our business partners with safer and smarter ways to care for their patients, customers and communities.

### Product Overview

RxWorks™ from AmerisourceBergen Technology Group (ABTG) is the platform on which many of our inpatient pharmacy solutions are integrated. Features include:

- A single database to manage and connect all of these components.
- Modularity that enables reporting consistency.
- A single point of entry for medications and users.
- Beyond integration, RxWorks is an open system, which means that ABTG designed the platform to have interfacing capabilities with virtually any vendor or device.

### Features & Options

#### ■ RxWORKS INVENTORY

This powerful inventory management software module integrates pharmacy, automation, materials, finance, nursing and purchasing systems. With the ability to provide a perpetual inventory system for any number of locations, RxWorks Inventory helps facilities save time and money through better managing drugs and materials processes.

#### ■ RxWORKS WORKFLOW

This integrated software solution is developed to address your needs for safer, more efficient pharmacy workflow management. RxWorks Workflow easily integrates into your environment and interfaces with the pharmacy information management system. Easy to learn and use, RxWorks Workflow is a comprehensive software solution that improves

safety and workflow by efficiently guiding staff to the appropriate pick locations (automated and manual), and more importantly, ensuring that the right drug is picked, in the right dose, for the right patient.

#### ■ RxWORKS 340B

Also integrated on the RxWorks platforms, RxWorks 340B offers a comprehensive approach to track, report and replenish 340B inventory, while improving the overall efficiency of your pharmacy's supply chain. Implementing this solution provides your pharmacy with the assurance that your 340B savings will be maximized, and your time spent ordering medications will be minimized.

#### ■ FASTFIND® UNIVERSAL

The carousel allows the technicians to retrieve medications from a single location, and the ergonomic design minimizes bending and reaching by picking from the waist height. Driven by the RxWorks platform, the FastFind Universal employs complete inventory management for all items stored in the carousel. That includes the ability to generate purchase order directly from the carousel when inventory is running low.

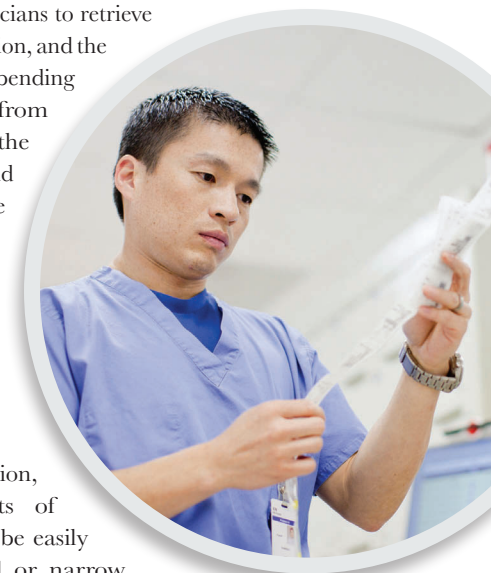

#### ■ FASTPAK® EXP

Our premier packaging solution, the FastPak EXP consists of packaging subunits that can be easily switched between standard or narrow width; standard for traditional unit dose and multi-dose solutions, narrow for automated dispensing cabinets or 30-day boxes. Innovative Smart Canisters are optional and can be interchanged quickly, enabling the automation of limitless oral solids.

#### ■ BARCODING STATION

The Barcoding Station allows barcodes to be added to products that are either not barcoded by the manufacturer or inadequately coded/unreadable by your BCMA scanner.

Through extensive market research and customer feedback, we update our technology solutions routinely. Look for more cutting edge introductions from ABTG coming soon!
