Company Background

RxSafe began operations in 2008. Many of the principal employees have been innovating together since the early 90's at such companies as Pyxis, Omnicell, and DDN where they have extensively contributed to the advancement of automation in the pharmacy industry. RxSafe's founder and CEO, William Holmes, has authored over 50 U.S. patents.

Product Overview

Our RxSafe 1800 is the leader in automated, high-density robotic storage, and retrieval of stock bottles. It represents an evolutionary leap in pharmacy automation technology because it goes beyond open shelf and drawer-based systems. Unlike vial filling robots that hold a small percentage of your formulary, an RxSafe system can securely hold virtually all of your oral solid stock bottles.

When you're busy, the RxSafe 1800 system really shines. Users report that a single operator can routinely fill at an effective rate of over 100 scripts per hour. If your space is tight, or there's better use for the space, RxSafe is the solution. In a 3-tower system, up to 5,400 stock bottle containers fit in 40 square feet of space.

Technology sets our automated strip packager, the RxASP 1000™, apart — offering more than 1,000 canisters, it takes oral solid packaging to a whole new level. Our easy-to-use universal canister means there are no more trays or remote filling stations.

Features & Options

■ RxSafe 1800

Accuracy. Efficiency. Security. With only one technician and pharmacist, virtually every pharmacy, every day can fill all prescriptions without extra filling staff. And, with one open bottle at a time, there's less chance for error, no wasted inventory, and no narcotics theft. In fact, the RxSafe 1800™ is so secure its been approved by the U.S. Department of Defense for CII narcotics storage and dispensing.

With the RxSafe 1800, inventory is always 100% accurate because it stores stock bottles behind locked doors and forces workflow at one station without the added expense of other software or hardware. Remote Stock Management is another standard feature of the RxSafe 1800.

■ RxASP 1000

The RxASP 1000™ breaks all the barriers of past strip packagers. Designed with the most versatile “hi-fidelity” pouch printing and the “easiest-to-open” pouches, it has the highest speed in the industry and the lowest operating cost. Plus, our consumables cost is the lowest in the industry. Why? Automatically and dynamically, the RxASP creates a single or multi-dose pouch that exactly fits the contents — saving material and time. No machine configuration required. What really stands out? This is the only strip packager with optional, built-in vision inspection. Designed to be modular and scalable, the RxASP line has the smallest footprint of any strip packager on the market. Additionally, we offer the RxASP 20™ for entry-level packaging and retail adherence programs.

■ RxAWC (Automated Will Call)

Still searching for the right will call system? RxSafe has the first “full-service” solution. The RxAWC™ features include:

- One finished goods inventory location.
- Secure storage (including narcotics).
- Smallest footprint (highest density storage).
- Fully automated, accurate package delivery, and RTS.
- Easy put away and fast loading.

Will call will never be the same again.

Testimonial

“Our primary goals for making this automation investment were to increase our workflow and inventory management efficiency so we could free up staff to spend more time and attention on clinical services and other revenue generating activities.”

— Eric Black, R.Ph., Owner, Mt. Vernon Medicine Shoppe
