Company Background

Veltek Associates, Inc. (VAI) is the leader in contamination control for pharmaceutical, biotechnology, medical device, and USP <797> industries worldwide. We design innovative solutions to address the control of particulate and microbial contamination while striving to develop meaningful technical relationships with our clients. VAI has been an industry leader since 1981 and owns over 60 U.S.A and foreign patents.

VAI's comprehensive USP <797> contamination control program provides a guide to assuring patient protection of compounding sterile preparations. Our Full Circle Approval addresses the practices and conditions required by USP to maintain a safe and compliant compounding environment. For each condition and practice required, VAI has an answer.

VAI is committed to continual innovation and improvement in our products to satisfy current and future regulatory requirements. Our corporate capabilities and industry experience provide the framework for continuing our leadership in contamination control. VAI's product lines include: environmental monitoring equipment, laboratory services including antimicrobial testing, saturated wipers, dry wipers, a USP <800> compliance wipe kit, sterile disinfectants, sterile sporicides, cleaning agents, cleaning application equipment, personnel gowning, and consulting and training services.

Product Overview

VAI's WipeDown 1-2-3™ has been specifically designed to address the risk of occupational exposure to most hazardous drugs during compounding sterile preparations, and administering, as outlined in USP <800>. WipeDown 1-2-3 is a sterile, three-step application wipe kit. When used in sequence, it provides deactivation, decontamination, and disinfection/cleaning of sterile compounding surfaces from most hazardous drugs. WipeDown 1-2-3 satisfies both USP <797> compounding sterile preparations and USP <800> hazardous drugs — handling in healthcare settings.

Each Sterile WipeDown 1-2-3 Kit Includes:

- Packet One: HYPO-CHLOR®, 5.25% Sodium Hypochlorite for deactivation.
- Packet Two: THIO-WIPE™, 2% USP Thiosulfate for decontamination.
- Packet Three: ALCOH-WIPE®, 70% USP Isopropyl Alcohol for disinfecting/cleaning.

All three packets consist of premium wiper material that is non-woven, non-shedding, and 9" x 12" for optimal use and saturation. Each chemical component is formulated with water for injection and filtered at 0.2 microns with sterility assurance via aseptic fill into gamma irradiated sterile components or through gamma irradiation. Individual kits, containing all three packets, are individually bagged and packaged into a liner bag for easy transport into sterile areas. Each kit is individually labeled with lot number and expiration and each shipment of WipeDown 1-2-3 is supported by lot specific documentation.

Product Specifications

■ Quality and Manufacturing

- Lot sterility tested according to current USP compendium.
- Filtered at 0.2 microns.
- Completely lot traceable.
- Double bagged sterile.
- All three chemicals are assayed according to current USP compendium.
- Gamma irradiated or aseptically filled into sterile components.
- Delivered with lot specific documentation.

■ Features and Benefits

- Packaged neatly folded for easy removal.
- Easy tear perforations on each wiper packet for easy open.
- Ready-to-use.
- 9" x 12" size.
- Wiper material is low in particulate shedding and soluble extracts.
- Deactivates most hazardous drugs present on compounding surfaces.

Trade Shows/Meetings Attended

VAI will be attending ASHP's Midyear 2016 Meeting where we will be displaying our WipeDown 1-2-3 and other USP <797> compliance products. Please come visit us at booth #817!
