Company Background

At PCCA, we help pharmacists and prescribers create personalized medicine that makes a difference in patients' lives. We serve as the complete resource for independent compounding pharmacies, providing high-quality products, next-level education, and above-and-beyond support.

What began in 1981 as a small network of pharmacists is now 4,000 members strong, with 360 employees worldwide and five distribution centers serving the United States, Canada, and Australia.

Product Overview

There are over 3,000 different kinds of skin diseases,¹ many of which are chronic and interfere with quality of life.²

Dermatologists have long recognized compounding as a productive avenue for medications, and dermatology patients are also familiar with having medications custom made for their specific skin care needs. PCCA has developed a number of dermatology-focused bases designed to make a difference for your patients and your practice.

Clarifying Base

This non-comedogenic cream base is ideal for patients suffering from acne or rosacea. Clarifying Base contains natural ingredients that may improve red, blotchy skin, including a unique avocado extract that nourishes the skin and decreases oil formation.

- May reduce the chances of irritation that are often seen with acne medications.
- May help promote faster release and improved delivery of common APIs.
- Can also be used in anti-aging formulations for patients with acne-prone skin.
- Has shown great stability when compounding with benzoyl peroxide.

PracaSil-Plus

Created for scar formulations and scar prevention, PracaSil-Plus features a proprietary blend of ingredients, including silicones and pracaxi oil.

- Appropriate for new or old scars.
- Rich in skin-friendly fatty acids and lipids.
- Can be used with or without active ingredients.
- Formulated without gluten, casein, dye, and parabens, among other allergens.

Whether a scar is caused by surgery, trauma, infection, or burns, PracaSil-Plus can make a dramatic difference.

XemaTop

Created for formulations targeting eczema, psoriasis, and xerosis (dry skin), XemaTop helps improve the appearance of red and irritated skin.

- Replenishes the lipids within the skin.
- Nourishes the skin's structural integrity.
- Helps restore the skin's barrier and prevent water loss.
- May improve the delivery of common APIs.
