

Around. Around. Around...

Tired of the Same Old Carousel?

Carousel drug storage systems have been around for years. It's time to consider a better way to automate your pharmacy drug storage and retrieval and eliminate work-arounds common with legacy carousel systems.

Only BoxPicker Pharmacy Storage System:

- Provides secure, fully automated storage of ambient, refrigerated and narcotic medications in a single unit
- Allows multiple users to access multiple stations at the same time, without losing control of medication safety or transaction security.
- Provides technicians access a single bin at a time, limiting access to drugs
- Adapts to growing pharmacies through modular components

*Seeing is
Believing*

Once you see the BoxPicker System in action, you'll believe that it runs circles around the competition. Its robotic technology handles 200 transactions per hour, so BoxPicker picks three times faster than a carousel, enhancing productivity and ROI, while eliminating picking errors.

Ready to stop going around best practice with your carousel system? Come see what the future of pharmacy looks like at the ASHP MCM in Orlando (Swisslog Booth #1113).
