

The Unique Quality of Fagron

The Synergy of R&D and Quality

Over 200,000 customers worldwide have access to over 5,000 high quality pharmaceutical raw materials and innovative vehicles. As a result of Fagron's global quality and R&D efforts, Fagron has a unique position which makes it attractive to pharmacies, hospitals and the pharmaceutical industry.

Fagron has sourcing offices in South America, North America, Europe and Asia, enabling Fagron to source its pharmaceutical raw materials globally while operating close to the production sites of pharmaceutical raw materials. On-site producer audits, (re)qualifications and regular performance assessments guarantee continuous control of Fagron's product portfolio.

Our innovative bases and vehicles are being developed in our own R&D center in St. Paul, MN, according to the latest scientific insights. We believe R&D never ends. We therefore

continuously perform scientific studies (e.g. stability, absorption) on our innovative vehicles with commonly prescribed active pharmaceutical ingredients (APIs). The results are regularly published in peer-reviewed journals and are available on our website.

Certificates of Analysis (CoA), Safety Data Sheets (SDS), and technical specifications are available for our products. Please visit fagron.us if you want to learn more about the unique quality of Fagron.
