

Correct Resident + Correct Drug + Correct Dose + Correct Time

Accu-flo is a server-based medication administration system designed for use in institutional pharmacies, assisted living, long-term care, rehab and correctional facilities. Our pharmacy interface allows the Accu-flo software to automate the process of distributing, tracking, and re-ordering medications and

treatments safely and efficiently for residential care facilities and pharmacies. Non-meds are easily tracked as well.

Our bi-directional pharmacy communication is an integral component of the software's eMAR, eControl, eLog, and ePrescribe modules providing complete functionality.

- eMAR – Ensures intended residents receive correct medications and dosages within CMS guidelines.
- eControl – Safeguards controlled medication from theft as logged by shift and nurse.
- eLog – Maintains accurate inventory of all drugs received for storage in a medication cart, as well as those returned after being discontinued.
- ePrescribe – Computerized prescription order entry which provides exceptional convenience with direct ordering capability with institutional pharmacies.

Accu-flo allows the pharmacy, assisted living, long-term care, and rehab facilities' staff to focus safely on quality resident care by reducing errors through automated record keeping, low inventory alerts, and programmable dosage information.
