With end-to-end solutions for reliable medical-grade storage and transport

Accurate temperature control is essential to preserve the integrity, stability and shelf life of extremely temperature-sensitive pharmaceuticals.

B Medical Systems' Ultra-Low Freezers are certified medical devices designed to help you store the most fragile vaccines, medicines and samples in the most temperature-secure environment. All these models provide superior temperature stability and uniformity, industry-leading recovery following door openings, warm-up times, and exceptional energy efficiency.

B Medical Systems' other refrigeration solutions from its Medical Refrigeration and Blood Management product lines will provide you with different temperature options for the safe storage and transport of your vaccines, medicines and samples. They include undercounter, upright and refrigerator-freezer combos, along with robust transport boxes to ensure an unbroken cold chain at every stage.

B Medical Systems is a manufacturer of medical-grade refrigeration and transport solutions **with over 40 years of experience.**
