

Long-term care's only workflow automation software

Logix enabled DocuTrack

Integra created Logix to automate faxing processes, workflow exceptions, and business rules. Automation can reduce keyboard clicks per task, eliminate errors associated with human processes, and store rules to maintain compliance and meet customer needs. Logix can be configured to complete simple, repetitive tasks or complex, time-consuming procedures. Fully integrated with DocuTrack, Logix can:

- Provide end-to-end automation of fax-related processes such as Refill Too Soon
- Store and easily edit customer-specific business rules or institutional knowledge
- Create, fax, and perform complete follow-up on forms with no manual intervention

Ask an Integra Sales representative what Logix can do for your pharmacy today.
