

Find us at the Intersection of Patient Safety and Pharmacy Efficiency

Hospital pharmacies juggle many critical tasks. The top priority is patient safety. Operational efficiency is important too; institutions seek to provide bar-coded medications while minimizing packaging tasks to enable BCMA.

American Health Packaging can support you at this "key intersection" of patient safety and operational efficiency. *The AHP unit dose line is the fastest growing in the industry.* And we offer many exclusive items to eliminate pharmacy packaging on lower-volume items.

Easy-to-read bar codes ensure both accurate and easy scanning. In addition, our cartons feature color-coded labels to more easily distinguish between similar items on the pharmacy shelf.

Recent product introductions include **Escitalopram tablets**, **Montelukast Sodium tablets**, **Nifedipine ER tablets** and **Pioglitazone HCl tablets**.

The image shows a woman in a pharmacy setting, looking at a box of medication. A large graphic of a street sign intersection with "SAFETY" and "EFFICIENCY" signs is overlaid. Below the sign are several boxes of American Health Packaging products, including Escitalopram, Montelukast, Nifedipine, and Pioglitazone, along with unit dose packaging.
