**PharmaJet®**

## Company Overview

Headquartered in Golden, CO, PharmaJet was founded to enhance developing world healthcare and patient experience at a reduced cost. PharmaJet is the leader in the development and manufacturing of needle-free technology. We are committed to providing value and safety to healthcare and our global community through leadership in the development and commercialization of needle-free injection devices.

## Product Overview

PharmaJet has developed novel technology for the injection of drugs and vaccines without a needle.

The core science involves creating a needle-free injection pressure profile which, when activated against the body, creates a “liquid needle” piercing the skin and delivering fluid to the desired depth with minimized pain sensation.

**The PharmaJet devices can drive traffic into your pharmacy by providing user-friendly and patient friendly features, increasing customer loyalty and retention.**

**PharmaJet takes the fear and anxiety out of immunization injections.**

## Why Needle-free?

Needles are a source of anxiety, pain, injuries and disease transmission.

In the US alone there are over 800,000 needle-stick injuries and a \$2 Billion burden for needle disposal costs and testing/treatment of needle-stick injuries per year.\*

Published reports indicate that upwards of 27% of the US population foregoes flu vaccinations due to fear of needles and the anxiety caused by needle injections.\*

Needle-free injections are safe and can provide value to patients, care-givers, insurance providers and families.

The PharmaJet reusable injectors and disposable needle-free, auto-disabling syringes are designed for fast and easy injections by care-givers worldwide.

The benefits provided by PharmaJet technology helps to advance patient care and reduce healthcare costs.

## Product Specifications

### Stratis® 0.5mL Needle-free Injection System

Accurately delivers drugs/vaccines to desired depth:

- Intramuscular IM
- Subcutaneous SC
