### Company Background

CAM Commerce Solutions was founded in 1983. Throughout this time, we continue to develop, market, install and service highly integrated Point-of-Sale and Payment Processing solutions for pharmacy retailers. These integrated solutions include: point-of-sale, electronic payment processing, inventory management, eCommerce shopping cart, gift card, customer loyalty, and extensive management reporting. We have a variety of products and services that address the automation needs of the pharmacy industry.

Now, we bring even more experience to our team with Celerant Technology Corporation. Celerant Technology's acquisition of CAM brings to the table 10 years of reputable experience. Regardless of the size of your business, we have a solution for you!

At CAM, we know service and ongoing updates to the software are important considerations in the purchase of a software system. It is important to know that the company behind the product will be around to protect and enhance your investment. CAM has more than 100 employees dedicated to improving our products and serving our customers. We offer phone support seven days a week, and ongoing program enhancements.

### Product Overview

#### Using the Linea-Pro Like a Pro

Use our mobile applications with the Linea-Pro to promptly complete your physical inventory, purchasing & receiving and stock transfers from anywhere! These standalone applications make your daily tasks faster and easier than using traditional wireless scanners. Our physical inventory mobile application has been designed to enable retailers to easily create a physical inventory and track their items, without having to connect to a wireless network. The app works on the iPod Touch and iPhone. Connect the Apple device to a Linea-Pro 4 to scan inventory quickly and accurately.

#### How the Physical Inventory App Works

Barcodes can be exported as a .txt file from CAM and added to the Inventory App, preventing re-entry and ensuring that all scanned barcodes are valid. Once the physical inventory scan is complete, export the data and sync the device to iTunes or a 3<sup>rd</sup> party data retrieval software. Save the inventory .txt file to RetailStar or CAM. It's that simple and fast!
