

FastFill® 54: Innovative Vial-Filling Technology from AmerisourceBergen® Technology Group

The FastFill 54 enables pharmacies to dispense more orders, more accurately and more efficiently than manual dispensing practices. The compact, direct-fill design makes it easy to integrate into virtually any pharmacy setting and it's expandable up to five units, so the solution can grow with your business.

Company Background

AmerisourceBergen Technology Group (ABTG) is a business of AmerisourceBergen Drug Corporation and has been a leader in the pharmacy automation industry for nearly 20 years. From small community pharmacies dispensing a few dozen prescriptions per shift to multi-facility health systems supporting thousands of lives, ABTG has technology solutions that will help increase patient safety, streamline medication management processes and control costs. The ultimate goal is to provide our business partners with safer and smarter ways to care for their patients, customers and communities.

Product Overview

The FastFill 54 is the latest extension of the popular FastFill line of vial-filling solutions from ABTG. This compact solution utilizes direct-fill technology via dedicated chutes to dispense oral solid medications accurately, securely and efficiently. Occupying less than five square feet, the FastFill 54 is the most compact device of its kind and ideal for pharmacies with limited floor space. It is designed for pharmacies with lower volumes that can benefit from vial-filling automation but do not require more robotic solutions.

Features & Options

Accurate – The FastFill 54 utilizes 54 factory-calibrated, 900cc canisters that dispense medications at an accuracy rate of greater than 99.99%.

Compact – At only 12 inches deep and less than five feet wide, the FastFill 54 delivers a tremendous amount of productivity in a minimal amount of physical space.

Compatible – Because medications are dispensed via 54 lockable chutes, the device is compatible with all vial types and sizes. In addition, the FastFill 54 can be interfaced with virtually any pharmacy information system.

Expandable – While the FastFill 54 is designed for lower-volume pharmacies, it is expandable – meaning up to five units can be connected to accommodate a growing operation.

Testimonials

“Three people can accurately run my drugstore after installing the FastFill 54. Those three people consist of me the pharmacist, a certified technician and another technician. On a busy Monday, three of us are able to fill 300+ RXs easily ...”

“Two machines fit in my 400 square foot pharmacy, easily! Maintenance is minimal and installation is simple ...”

“Two machines are filling almost 45% of my RXs. I average 200 [prescriptions] a day and the 108 drugs combined in the two machines are increasing my accuracy and lowering my labor costs.”

— Robert Bullington, PharmD
East Tennessee Discount Drug and Wilson's Sav-Mor Drugs, LLC

Additional Product Lines

FastFill 220 is designed for pharmacies filling 500 to 1,000+ prescriptions per day. With 220 factory-calibrated canisters and two robotic arms to complete the direct filling process, the FastFill 220 can dispense over 200 prescriptions per hour while eliminating the risk of cross contamination.

FastFill 120 is designed for pharmacies filling 200 to 500 prescriptions per day. This robotic dispensing device eliminates the risk of cross contamination with direct-fill technology, accessing medications in 120 factory-calibrated canisters.

Efficiency WorkPath® for community and outpatient pharmacies streamlines the entire fulfillment process, managing and tracking every order step-by step to guarantee accuracy each and every time. Improving accuracy, speed and efficiency, Efficiency WorkPath can provide comprehensive dispensing workflow management for complete order processing.

FastPak® EXP is our award-winning, premier packaging solution consisting of subunits that can be easily switched between standard or narrow width packaging; standard for traditional unit dose and multi-dose solutions, narrow for automated dispensing cabinets or 30-day boxes. Innovative Smart Canisters are optional and can be interchanged quickly, enabling the automation of limitless oral solids.

IntelliOrder® is a Web-based, EDI-capable inventory management software solution that can be accessed from any location with an Internet connection. With a secure Web environment, IntelliOrder keeps data protected and provides full-system backup.
