FillSafe™ Medication Security for Kirby Lester Robots

Kirby Lester's KL60 and KL100 are the safest retail/outpatient pharmacy robots with the new FillSafe™ security system. FillSafe eliminates the chance of dispensing from the wrong cassette.

Company Background

Kirby Lester is a leading developer of tablet counters and robotic dispensing technology for community pharmacies. Kirby Lester devices significantly improve medication counting accuracy and reduce labor time associated with medication dispensing. Kirby Lester products can be found in more than 40,000 retail, hospital, specialty, and mail order pharmacies in more than 40 countries.

Product Overview

FillSafe is built-in peace of mind for technicians and pharmacists alike in retail/outpatient pharmacies. The foolproof FillSafe security system prevents dispensing from a cassette whose refill or return-to-stock was not authorized by a pharmacist. When any medication cassette is removed from the KL60 or KL100 robot, that cassette is automatically deactivated; reactivation is customized on the pharmacist's terms. For instance, the pharmacist in charge can set a certain time lapse for a cassette to be returned to the robot. Or a user can be forced to verify the cassette return with a fingerprint scan on the robot's biometric finger pad. Or the pharmacist-in-charge's fingerprint scan may be required for reactivation. Kirby Lester developed this new technology to prevent a user from bypassing the cassette refill process.

Along with the FillSafe security system, Kirby Lester robots are equipped with multiple safeguards, including user fingerprint tracking, NDC barcode verification, 20+ reports for metrics, and keyed cassettes. The KL60 and KL100 robots balance the highest security standards with the fastest dispensing and most hassle-free operation of any pharmacy robot.

Unique Robotics

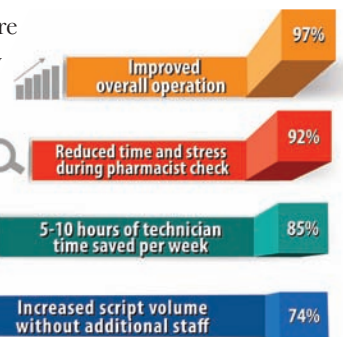

- Fit your pharmacy without remodeling: The KL60 and KL100 robots have the smallest footprints in the industry.
- Fully automate only what makes sense: The KL60 handles 35-40% or more of a pharmacy's total daily orders, while the KL100 handles 50% or more.

- Fast operation: Label, count and present orders in about 30 seconds.
- Fast, accurate cassettes never need recalibration.
- Inventory control, including narcotics.
- Standard 110v power; no special compressed air or wiring needed.
- Maintenance takes just a few minutes per day.
- Industry best uptime and support.
- Combines with Kirby Lester's tabletop counting and verification devices for 100% verification of all orders.

Proven Relief for Pharmacies

Kirby Lester's robotic dispensers were found to dramatically boost efficiency and provide an attractive ROI.

In a 2014 user survey, Kirby Lester users reported that their KL60 or KL100 robot directly enabled their staff pharmacists and technicians to concentrate on major initiatives such as medication adherence, immunizations, process improvement, and customer care.

Full Line of Automation

Kirby Lester offers more than just a one-size-fits-all box. We provide you with a full line of pharmacy automation to safely and quickly dispense 100% of medications. We help you choose what's exactly right for your pharmacy's unique needs.

- Full robotic dispensing: Compact **KL60** (top 60 medications) or mid-sized **KL100** (top 100 medications).
- Eliminate hand-counting: **KL1**.
- Count and verify every order: **KL1Plus** and **KL20**.
- Automate and verify every order, ideal for narcotics and 90-day fills: **KL30**.
