Company Background

TCGRx is a leading supplier of pharmacy automation. Our solutions can be scaled from simple packaging technology to enterprise-level perpetual inventory management. That means providing not just the tools to make your pharmacy more efficient, but also the thinking behind those tools. TCGRx provides design and consultation services for solution integration in all pharmacy markets.

Product Overview

PharmLoc allows your pharmacy to securely store At-Risk-Medications (ARM). Using computer-controlled locking mechanisms, ARM access is restricted to designated users that requires authentication for entry. This allows for safe and secure med storage. Keyed entry allows for manual drawer release in case of power failure. Optional audible and light alarms alert the pharmacy staff when an ARM drawer is open. The system tracks all activities including who and when users accessed an ARM drawer. PharmLoc provides detailed documentation and auditing of all ARM usage.

Working in tandem with Beacon®, PharmLoc™ secures medications within your pharmacy. Using pick-and-put-to-light technology, users are guided to the correct location of the medication. Barcode scan verification is used throughout the process to ensure the location and inventory of the medication. These security features identify theft and diversion in your pharmacy.

Additional Products

■ Beacon Workstations

Beacon Inventory Management System transforms your pharmacy using high-density shelving and inventory stocking algorithms to create efficient storage, organizing all medication by activity, zones and process. You now have stations to place your fastest moving inventory, unit of use medications, control meds and storage for slower moving medications. These features create a safe, accurate, and efficient process from beginning to end.

■ DeliverRx™

Available as a stand-alone product, or as part of the Beacon System, DeliverRx stores prescriptions ready for pickup in easy-to-find locations. This system is customizable in many different fixture configurations for any pharmacy layout, including wall unit, under-counter drawer system, and/or corner carousel. Customize your pharmacy by using DeliverRx bags and bulk shelving, and even integrate refrigerated items. Patients no longer wait while the technician searches for their prescription. DeliverRx ensures patients receive all of their prescriptions and only their prescriptions.

■ AVF™

AVF-70 automates the counting of up to 64 medications through canister technology and can be expanded in increments of 6 additional direct fill canisters for handling do-not-mix meds with the AVF-6. With a small footprint, automated vial filling from TCGRx, brings a great deal of value at a price that is affordable for any size pharmacy.

The AVF counts and stages up to 10 orders ahead of the technician at all times. Pharmacies can use any vial size and shape with no limitations. The unit can be integrated as an end cap or countertop solution. We also offer an optional cart that can be used to store vials and medications.

Markets Served

- Retail – Independent
- Retail – Chain
- Long-Term Care
- Hospital – Inpatient
- Hospital – Outpatient
- Nutraceuticals
