TCGR x
PHARMACY WORKFLOW SOLUTIONS

Company Background

TCGRx is a leading supplier of pharmacy automation. Our solutions can be scaled from simple packaging technology to enterprise-level perpetual inventory management. That means providing not just the tools to make your pharmacy more efficient, but also the thinking behind those tools. TCG provides design and consultation services for solution integration in all pharmacy markets.

Product Overview

■ **Pharmacy Design:** TCGRx engineers work with you to develop the best layout for your workflow within your space constraints. Our process begins with an evaluation of your existing setup, an understanding of your needs and concerns, and an analysis of your current workflow process. Our designers will develop a plan that fits your unique pharmacy, including incorporating your existing fixtures and machines while integrating TCG equipment to maximize your results. You will immediately see a decrease in time spent moving between stations, a reduction in inventory, a drop in fill times and an increase of space in your pharmacy.

■ **Adherence Packaging:** The AdherePacRx™ solution offers a unit dose or multi-med pouch containing all of a patient's medications for a given pass time. The pouches are automatically generated from one of our ATP-Rx™ pouch packaging solutions through an interface with your current pharmacy information system.

The pouches have a serrated edge and are easy to open, helping ensure the patient takes the medications as directed. The AdherePacRx solution provides the ability to generate reminder pouches for non-oral solids such as inhalers or topical creams, so every medication prescribed is prompted at the correct time.

Our Automated Tablet Packager (ATP-Rx) is the industry-leading oral solid packager. Engineered to provide better performance and reliability, ATP-Rx facilitates both unit dose and multi-med packaging with simple-to-use software. Working in tandem with the SmartTrayRx™, ATP-Rx is the only system on the market allowing 100% automation of formulary medications. Additionally, we have designed the ATP-71™, offering the same great features within a smaller footprint.

■ **Image Verification:** InspectRx™ closes the loop to deliver accurate and safe results to patients by using electronic verification. Images are archived of every pouch, front and back, for future reference. InspectRx features a corrector camera, which allows for updated pouches to also be documented. The optional CollateRx enhances the capabilities of InspectRx by cutting, rolling and taping pouches by patient, drug or med cabinet.

■ **Inventory Management:** Beacon® transforms a pharmacy into a superbly efficient pick and storage center, with pick-and-put-to-light LEDs, barcode confirmation and image verification of every med, allowing rapid location and dispensing. TCG inventory management systems provide visibility, at the touch of a button, to the location of a specific medication, how long it has been stocked, the exact bottle quantity, if it is opened or unopened and its expiration date. Beacon can also manage unit dose pouches for inpatient workflow, easily integrating with carousel storage.

■ **High-Density Storage:** HDStockRx™ storage system provides dense storage capacity, easy access and clear visibility. No other system offers drawers to store more packages in the same space and configure to your pharmacy's needs. HDStockRx is organized and tailored to your pharmacy, with labeling and dividing features to make finding medications quick and easy.
