Company Background

Medterra provides customers with true seed-to-sale purchases. Our industrial hemp is grown and extracted in accordance with the strict guidelines of the Kentucky Department of Agriculture. Each and every product that leaves the facility must be third-party tested to ensure consistency and quality.

Product Overview

Medterra Pharmacy advanced line will consist of advanced delivery methods and advanced cannabinoid blends, along with stronger strengths in our topicals. The broad spectrum tinctures offer an advanced cannabinoid blend, including cannabinoids found within full spectrum oil-with Zero THC. These tinctures provide stronger concentrations of CBG, CBN, and CBC than most full spectrum products in the market. Our liposome technology increases the bioavailability of our products making CBD more efficacious at lower concentrations. We are excited to release this advanced line in Q1 2020 for all independent pharmacies to offer for their patients.
