Company Background

Nuvm is a leading integrated pharmacy solutions partner that optimizes accessibility and adherence to medication improving clinical care for non-profit healthcare organizations. Through a complete technology suite, integrated service delivery, and elevated 340B expertise, Nuvm's holistic solution yields enhanced drug inclusion, increased financial performance, and improved patient care.

Nuvm's story began in 2014 and grew quickly into three separate brands: 340Basics, Assent, and Apovia. Together in improving accessibility and adherence to clinical care, but seemingly independent in operation. As the brands grew and expanded, the value of joining forces became clear. In 2023, Nuvm merged their expertise and resources, bringing one comprehensive solution, streamlined experience, and equitable partnership to medically underserved, non-profit healthcare organizations.

Combining all of our solutions and services represents our commitment to facilitating 340B programs — from compliance and optimization to patient engagement and education — through a fully integrated suite of cloud-based pharmacy solutions.

340B Technology

■ **Enhance program management, increase savings, and optimize performance.**

Nuvm's proprietary software empowers all eligible organizations to efficiently manage the complexities of the 340B pharmacy program. Our industry-leading technology solutions, knowledge, training, and service offerings enable healthcare organizations to increase claims capture and optimize their programs' clinical and financial results.

Our 340B technology suite including TPA services such as contract pharmacy, split-billing, and advanced referrals, offers precision and attention to detail, along with the flexibility to customize the needs of each unique healthcare organization.

Pharmacy Management

■ **Implement a more robust healthcare mission and enhance financial performance.**

We offer pharmacy management services to implement and manage in-house pharmacies to improve patient script capture and avoid manufacturer blocks. Nuvm offers top to bottom support in building or managing in-house pharmacies (credentialing, licensing, construction, ordering, hiring, etc.), and guides health organizations through the full process, focusing on providing the best care for their patients.

Program Integrity

■ **Remain compliant, pass audits with confidence, and outsource program management.**

Evolving state and federal regulations can often challenge health organization's program integrity. We use our experience to deliver a broad scope of services, such as HRSA mock audits, 340B consultation, and outsourced 340B management to deliver thorough analyses and recommendations.

Our expert services and consultants bring clarity and compliance to your 340B program for better clinical and financial results.

Testimonial

"Your entire team has a wealth of experience matched with a caring heart and a fierce determination which has enabled you to accomplish so much and I thank you for sharing that well-earned insight."

— Executive Director, Health Center, Brooklyn, NY
