Company Background

Centice Corporation creates and delivers advanced technology solutions to select markets in pharmacy operations, healthcare, central fill operations, manufacturing and government. By leveraging an expertise in applied Raman spectroscopy, computational sensors, and machine vision technology, Centice provides products and integration expertise that saves lives and protects people's lifestyles. Company management and engineering teams continuously work with partners to address emerging business needs. Headquartered in Morrisville, NC, and founded in 2004, Centice maintains sales offices across the country and markets products directly and through distributors.

Product Overview

The PASS Rx[®] system provides solid dose medication verification. The technology scientifically verifies NDC barcode data on the prescription vial to the vial contents by using laser technology to chemically verify that the right drug and right strength is leaving the pharmacy. PASS Rx easily integrates into any pharmacy work-flow due to its small footprint. PASS Rx provides protection for patients and your business from quality related events that may occur due to human error. In addition, PASS Rx can be used to perform accuracy scans for barcode-based certification of non-vial dispensed drugs (creams, lotions, pens).

Features & Options

PASS Rx[®] reduces common dispensing errors that create additional work and that add to bottom line pharmacy costs. It provides superior verification process compared to bar-code matching or visual reference. The flexible, low cost design is ideal in pharmacy or central fill setting. Date, time and prescription number is recorded to provide peace of mind and reference data. PASS Rx[®] is easily integrated with popular Pharmacy Management Systems to enhance record keeping.

Markets Served

Pharmacy Operations: This market includes small, medium, and large retail chain pharmacies, as well as independent pharmacies. Centice's PASS Rx[®] system chemically verifies dispensed medications thereby improving quality in pharmacy operations.

Healthcare: Centice is serving different areas of the healthcare industry, focusing on the hospital segment, which includes inpatient/outpatient pharmacies, emergency departments, and long-term care facilities. Centice's PASS Rx[®] system is driving hospital pharmacies towards their zero error goal.

Central Fill Operations: Centice's core technology can be integrated into an automation line within a central fill pharmacy operation facility to chemically verify prescription drugs and help customers achieve labor and productivity efficiencies, while maintaining high throughput.

Other Product Lines / Services

PINPOINT Rx[™], RECAP[™].

Product Specifications

- Weight: 22 lbs.
- Dimensions: 17"L x 8.5"W x 17"H
- Electrical input: External 12V block, max current 8A
- External interfaces: Ethernet, VGA, 4 USB Ports
- Display: 6.5" Color TFT-LCD (640x480)
- Barcode scanner: 3800g General Purpose Handheld Linear Imager with stand
- Barcode formats: Supports all popular formats
- Processor: Intel[®] Core[™]2 Duo Processor
- Operating system: PASS Rx[®] is built on Windows XP Embedded and the .NET Framework
- Unit Classification: Class I Laser Product
