### Company Background

The Pharma Compliance Group (PCG) is comprised of former Drug Enforcement Administration (DEA) Special Agents, Diversion Investigators, and private security experts providing specialized consultation, compliance, and field services to the pharmaceutical industry. Our team members have extensive experience conducting regulatory inspections, evaluations, and investigations for DEA registered entities. PCG has a strong reputation assisting our clients develop and implement comprehensive compliance management solutions. Our staff is committed to providing the pharmaceutical industry with the expertise needed to maintain effective compliance with the Controlled Substances Act (CSA), and the regulations contained in the Code of Federal Regulations (CFR).

### Product Overview

The Pharma Compliance Group is the leader in providing regulatory DEA compliance services to the pharmaceutical industry. Our staff, comprised of former DEA Special Agents and Diversion Investigators, is fully versed regarding CSA regulations, and how they impact your business operations.

#### ■ Our Pharmacy Solutions Will:

- Assist both independent and chain pharmacies in establishing and implementing a comprehensive compliance program.
- Provide an in-depth assessment into the company's level of compliance with federal and state controlled substance regulations.
- Will implement procedures and provide employee training to ensure compliance with CMEA record keeping and security requirements.

### Compliance Auditing

Pharmacies bring a component of complexity to your audit program, maintaining the integrity of your pharmacy's compliance with various federal and state laws and regulations. Adherence to the Controlled Substance Act and DEA Regulations require strict compliance to how certain prescription and non-prescription substances are dispensed. A failure to comply can result in substantial fines, license suspension, or worse. These issues affect your profitability, brand recognition, and consumer respect. PCG has a proven history of developing pharmacy regulatory audits designed to ensure that policies, guidelines, and requirements are met. Our proprietary team of nationwide professionals provide an objective, third party approach, supported by our proven training methods that ensure consistency and integrity in our audit approach.

### Program Development

The Pharma Compliance Group builds comprehensive internal programs that ensure compliance to regulations. Each program is customized to balance the specific needs of the organization with the requirements of federal regulations. Our programs include a thorough assessment, policy and practice development, due diligence investigations, and monitoring and auditing services.

### Know Your Prescriber

Dispensing controlled substances can be a risky endeavor. It is important that the pharmacy and its pharmacist exercise sound professional judgement when deciding about the legitimacy of a controlled substance prescription. The standards of legitimate medical purposes create a necessary, but heavy burden. Although many prescribers are trustworthy and prudent, a single careless or dishonest practitioner can result in millions of dollars in fines and the loss of a pharmacy's registration.

Retail chains, independent pharmacies, as well as, wholesale drug distributors have become law enforcement's focal point in the effort to reduce the nation's prescription drug abuse epidemic. The problem is there is very little information available to determine the good doctors from the careless or dishonest ones. The solution is a "trust but verify" approach that respects the medical practitioner's expertise, but safeguards a pharmacist's own practice and reputation.
