Company Background

Founded in 1967 and exclusively devoted to the needs of the compounding pharmacist, at IMI, creating products for the compounding pharmacist is our sole focus. As a result, our customers experience the quality, service, and value that only a specialized partner can offer. Through our partnerships with compounding professionals, we continue to advance our devices to serve the healthcare community. From new product developments to customized packaging configurations, IMI's customer-focused ethos and superior engineering capabilities allow us to be responsive to the needs of our partners and customers. Our capabilities and highly trained teams are why we have remained the industry standard for tamper-evident cap technology and how we continue delivering customer-focused products to enhance pharmacy productivity, safety, and security. All IMI products are manufactured in the U.S. at our FDA-registered, ISO 13485-certified facility under the strictest quality standards.

The Experts in Tamper Evidence

Compounded preparations are at their greatest risk when they leave the custody of your pharmacy. The benefits of tamper-evident products to address this risk have been recognized within the standards and guidelines of multiple influential organizations, including ASHP and the FDA. Tamper-evident products increase overall accountability in the chain of custody of medication, maintain sterility, prevent leakage, ensure patients receive the full intended dose, and reduce the risk of contamination. IMI's Prep-Lock™ line of products provide high-value and quality, tamper-evident closures devices for a variety of drug delivery containers including IV, enteral and oral syringes, medication cassettes, and IV bags.

■ Prep-Lock™ Tamper Evident Caps for IV Syringes

If your facility uses an outsourced compounder, chances are you are already familiar with IMI's Tamper Evident Cap technology. Over 85% of the top outsource compounders choose IMI Tamper Evident Caps to secure their IV syringe. You can easily incorporate the use of this cap for your in-house preparations to provide standardization of all syringes throughout your hospital. Installing the tamper-evident cap in your compounding operation is highly efficient. Each sterile tray of 10 caps offers the pharmacist the ability to quickly install the cap with a simple twist of the syringe. This helps to reduce the risk of touch contamination

and enhances aseptic technique. Administering a syringe is very easy for the authorized clinician. Simply pull off the outer sleeve of the tamper-evident cap, unscrew the remaining luer lock cap, and discard.

A choice of three different colored caps and two outer sleeve styles allows the pharmacy the ability to color code either specific drug classes or processes.

■ Prep-Lock™ Tamper Evident Additive Port Caps

Provide remarkable protection, and protocol assurance to the medication ports of a variety of IV bags, including Baxter, B. Braun, Fresenius Kabi, ICU Medical, and more. The simple one-handed installation and considerable contributions to the integrity of IV compounds have gained acclaim with pharmacists and healthcare professionals. These products extend the intention of USP <797> from pharmacy to patient by providing last-mile security that strengthens pharmacist and HCP confidence and reduces the risk of contamination and diversion.

■ Prep-Lock™ Tamper Evident Caps, Male Luer Lock for CADD Cassettes

Drugs are prepared in a variety of devices with different connector types. When those devices feature a female luer lock connector, the Prep-Lock Tamper Evident Cap with Male Luer Lock Connector can provide all the same safety and protection benefits found in IMI's entire family of tamper-evident products.

■ Prep-Lock™ Tamper Evident Caps for ENFit® Syringes

The ENFit® connector standard (ISO 80369-3) for enteral feeding devices is a welcomed feature for mitigating potential misconnections. IMI offers a tamper-evident cap for ENFit syringes that further enhances patient safety. These innovative caps help guard against drug diversion and misuse, and increase confidence in your enteral medications by ensuring content's integrity from the time the syringe leaves the pharmacy until the time it is administered. The caps are compatible with both standard and low dose ENFit syringes.

Testimonial

"I find their [tamper-evident] products to be the best on the market in terms of the device itself, the functionality, and the securement."

— Neil Colby, RPh, Director of Infusion Pharmacy Services, CDRX Infusion

Additional Product Lines

IMI manufactures a variety of high-quality devices for the compounding pharmacist including: Prep-Lock™ Tamper Evident Caps, Prep-Seal™ Caps and Plugs, Prep-Fill™ Sterile Connectors, Rx-Vent™ Filtered Venting Needles, and Rx-Tract™ Aspirating Needles.
