Company Background

STChealth's history in developing the first immunization information system (IIS) in 1988 and continuing with over 35 years of work in both the public and private immunization ecosystem gives STChealth the experience to support more than a quarter of all vaccinations reported nationwide. Through a national network of over 80,000 providers and pharmacy partners, STChealth executes the mission to eradicate preventable disease and empower individuals through innovative technology and service solutions.

Product Overview

ImmsLink's bi-directional immunization interface empowers pharmacies to increase vaccination rates by delivering simple, guaranteed reporting compliance and real-time access to patient immunization histories. ImmsLink utilizes STChealth's proprietary decision support algorithm, based on the ACIP schedule, so pharmacists can see a patient-specific guide to due or past-due vaccination opportunities and make recommendations to get patients up to date. Following administration, providers can record and report immunizations in real-time to state immunization information systems using our simple user interface or leveraging one of our many integration partners. STChealth takes all the complexity of managing IIS connections and requirements out of the operator's hands.

Testimonial

"ImmsLink from STChealth has been such a time saver for our pharmacy. We always highlight the importance of focusing on the patient with our team, and automating the immunization reporting process allows us to do that. We're able to scale up our immunization program and offerings, because we're not having to manually data enter information into the vaccine registry. We utilize the automatic reporting that allows us to continue great patient care."

— Rannon Ching, PharmD, President/Chief Pharmacy Officer,
TarryTown Pharmacy, Austin, TX
