## Company Background

TCGRx is a leading supplier of pharmacy automation. Our solutions can be scaled from simple packaging technology to enterprise-level perpetual inventory management. That means providing not just the tools to make your pharmacy more efficient, but also the thinking behind those tools. TCGRx provides design and consultation services for solution integration in all pharmacy markets.

## Product Overview

### ■ AVF™

AVF-70 automates the counting of up to 64 medications through canister technology and can be expanded in increments of six additional direct fill canisters for handling do-not-mix meds with the AVF-6. With a small footprint, automated vial filling from TCGRx brings a great deal of value to any size pharmacy.

The AVF counts and stages up to 10 orders ahead of the technician at all times. Pharmacies can use any vial size and shape with no limitations. The unit can be integrated as an end cap or countertop solution. We also offer an optional cart that can be used to store vials and medications.

## Additional Products

### ■ Adherence Packaging

Our Automated Tablet Packager (ATP™) is the industry-leading oral solid packager. Engineered to provide better performance and reliability, ATP facilitates both unit dose and multi-med packaging with simple-to-use software. Working in tandem with the SmartTrayRx™, ATP is the only system on the market allowing 100% automation of formulary medications. TCGRx has also designed the ATP-71™, offering the same great features with a smaller footprint. The AdherePac™ pouch produced by the ATP contains all of your patient's medications

for a given pass time. The pouches have a serrated edge and are easy to open, helping ensure the patient takes their medications as directed. The AdherePac solution provides the ability to generate reminder pouches for non-oral solids such as inhalers, or topical creams, so every medication prescribed is prompted at the correct time.

### ■ High-Density Storage

HDStock™ storage system provides dense storage capacity, easy access, and clear visibility.

No other system offers drawers to store more packages in the same space, configured to your pharmacy's needs. HDStock is alphabetically organized and tailored to your pharmacy with labeling and compartmentalizing features to make finding medications quick and easy, and can be integrated with Beacon®.

### ■ Inventory Management

Beacon® is a full inventory management system, transforming a pharmacy into an efficient pick and storage center. Pick-and-put-to-light LEDs, barcode confirmation, and image verification of every med, allow rapid location and dispensing. TCG inventory management systems provide visibility, medication location specifics, exact bottle quantities, status (opened or unopened), and expiration date. Beacon can also manage your will-call with DeliverRx™ for prescription pickups, and PharmLoc™ for secure medication storage - all with full inventory and reporting capabilities.

## Markets Served

Retail Independent, Retail Chain, Long-Term Care, Hospital Inpatient, Hospital Outpatient, Nutraceuticals
