Company Background

Micro Merchant Systems is a pharmacy technology company that has been providing exceptional management solutions to the independent pharmacy market for over 30 years. Thousands of pharmacies throughout the U.S. trust our PrimeRx™ system to manage their retail, long-term care, specialty, compounding, 340B, mail order, physician's office, hospital and health system outpatient, and hub service pharmacy technology needs.

Product Overview

PrimeRx™ provides essential functions including patient and provider intake, prescription processing, workflow management, claims processing, labeling, dispensing, inventory management, report generation, automated refill, and patient record management solutions.

The PrimeRx™ platform was developed in direct response to pharmacist needs. Pharmacists expressed a need for a user-friendly, technology-based solution that would allow them to add efficiency to their workflows, automate key processes, and better serve patients and we delivered. PrimeRx is a pharmacy tool for nearly every pharmacy service.

Prime Rx Features & Options

■ PrimeRx™ Pharmacy Management System Key Features Are:

- Customizable workflow and workflow efficiency tools to reduce dispensing errors and optimize pharmacy operations.
- Integration with 100 plus interfaces (e.g., wholesalers, IVRS, dose-dispensing machines/robots, EMRs).
- Pharmacist CPESN® eCare plan.
- Real-Time Prescription Benefit by Surescripts®.
- ScriptDrop courier and shipping service integration.
- Script Management Partners (SMP) automates immunization reporting to state/local registries.
- Pointy from Google allows OTC products to appear on Google.
- eVoucherRx™ from RelayHealth addresses high-cost prescription abandonment with OTC coupon visibility.
- Configurable clinical assessment module with action list.

- RPh patient payment and profit dashboard.
- Compound drug ingredient sheet.
- New prescription or patient entry through driver's license scanning.
- Embedded patient communication tools for two-way text and call enablement.
- COVID-19 enrollment, billing, and reporting functions.
- Remote signature capture functions.
- Contactless copayment collection through PrimeRxPAY™.
- Cloud-based data encryption and biometric security.
- Patient management, medication synchronization, CMS medication adherence reporting, and DIR calculation tools.
- Business reports (e.g., profit revenue report, patient profitability report, profitability by drug category, top performer's report, etc.).
- Built-in audit controls (e.g., changes in filling, reversing, voiding prescriptions).
- Multiple inventory solution, managing separate inventories from each source (i.e., 340B), while maintaining visibility into the overall retail inventory function.

Additional Product Modules

- PrimeRxSP™ (specialty pharmacy software), designed for the unique record-keeping, patient care, and analytical needs of specialty pharmacy operations.
- PrimePOS™ (point-of-sale), built for quick and precise customer check-outs. Inventory management with complete EDI integration with wholesalers to control and automate the ordering process.
- PrimeESC™ (electronic signature capture), scan and link the patient's HIPAA signature to patient records in the PrimeRx™ pharmacy management system.
- PrimeDMS™ (document management system), utilizes Windows compatible scanners to record scanned documents into PrimeRx™.
- PrimeDELIVERY™ (delivery module and app), work with PrimeRx™ and PrimePOS™ to process prescriptions for delivery route optimization, signature capture, and copay collection.
- PrimeMD™ (web portal) workflow optimization tool connects patients, doctors, health facilities, and pharmacies to the PrimeRx™ pharmacy management system.
