## Company Background

What started as a quest by one pharmacist on a mission to discover pharmacy software that truly worked with his unique practice, ended with the realization that if a pharmacist truly wanted software a pharmacist would want, a pharmacist would need to write that software. Soon afterwards, this pharmacist realized that his was not the only unique pharmacy practice. In fact, every pharmacy owner was innovative in their own way and each wanted features in their software that could help them harness these innovations. Thus, RS Software was born, and over the last decade and a half the team at RS Software has continually developed products that are miles ahead of their competition. As a Microsoft Partner, it is RS Software's mission to create new and innovate software products, which would be found from Microsoft, Apple and other cutting edge software companies. From custom reporting tools to financial analysis tools to label design tools, the RS Software team has produced tools that work like you'd expect: easily and intuitively. When you combine this with web and iPad clinical tools that allow you to better manage your patients' health, RS Software becomes the technology partner in your pharmacy that you have always wanted and have always expected to be there.

Always innovating, RS Software provides pharmacy owners with a wide range of tools. We are pleased to announce that our foundation softwares, Script Assist and Compound Assist, have been upgraded.

## Script Assist Overview

Script Assist is designed to help your pharmacy business function efficiently and effectively. Use Script Assist for dispensing prescriptions and billing third party claims. Build prescriptions, send claims to insurance, keep patient history records, check drug interactions, and more with this powerful and easy-to-use software. With its familiar 'Windows' interface, Script Assist is simple to learn, use, and integrate into your workflow.

Script Assist will help you manage your retail or compounding practice while simplifying and growing your business!

## Features of Script Assist

- Queue Workflow
- Automatic Allergy + Interaction Processing
- User Control
- Quickbooks Integration
- Long-Term Care
- MAR (Medication Administration Record)
- CaraSolva & Accu-Flow Integration
- Batch Processing
- DUR Data
- Compound Assist Connection
- Automatic Updates
- Label Designer
- POS Integration (Emporos and Many More)

## Compound Assist Overview

Compound Assist is compounding software used to keep track of formulas and record when formulas are compounded. This extremely user-friendly software program comes with approximately 3,000 chemical records pre-loaded that can be modified or added to. It also comes pre-loaded with approximately 2,500 peer-reviewed formula templates.

Compound Assist helps you track chemical ingredients, expired ingredients and general stock. With helpful alerts and a customizable workflow designer, Compound Assist is sure to improve the efficiency in your compounding pharmacy business.

## Features of Compound Assist

- Queue Workflow
- 3,000 Pre-Loaded Chemical Records
- 2,500 Peer-Reviewed Formula Templates
- Easy Balance Integration
- Customizable Themes
- Barcode Scanning
- Formula Sharing
- Tracks Inventory and Price Information
- Tracks Prescriptions
- Extensive Report System
