Company Background

Rx Systems, Inc. is a manufacturer and distributor of pharmacy packaging and supplies including Rx labels, custom bags, vials, counter supplies and pill cards. Bundling packages for labels, vials and toner are available. We have been servicing the community pharmacy market for over 34 years. Let us be your single source supplier.

Product Overview

Eyecon is fast, becoming the preferred choice of pharmacies that have decided to automate their prescription filling process. Eyecon's unique Visual Counting System™ is up to 76% faster and significantly more accurate than manual counting. It helps reduce tedium and stress while allowing employees to spend more time with customers. Your customers will benefit from improved customer service and Rx accuracy.

Scanning the patient label and NDC from the stock bottle validates that the proper medication is being dispensed. Besides providing peace of mind, the validation mode also captures a photo of the pills that is saved by prescription (sample of the photo is pictured to the left).

The Eyecon is ideal for all hand counted scripts, but can also be used to double or triple count controlled substances, making it a perfect complement to robotic dispensers.

Staff are able to analyze various aspects of prescriptions filled by utilizing the Audit Reports feature. Using filters, you can choose to view only C-II prescriptions, only fills of a specific NDC #, all fills performed by specific user, all open partial-fills, or a summary of the types and number of prescriptions filled per day, and more.

Testimonials

"We own 10 Eyecons between our eight stores. I wouldn't operate a pharmacy without one!"
— Michael Schwartzwald, Guide Point Pharmacy

"I purchased the Eyecon in 2010 and realized it saved me 3 hours per day!"
— Ken Rogers, Stone Plaza Pharmacy

"We have a competing product that rarely gets used due to its unreliability. Definitely the best bang for the buck!"
— Matt Church, M&S Pharmacy

"There isn't another piece of technology that has made a bigger difference in our pharmacy workflow in the last 10 years!"
— Greg Paisley, Shrivers Pharmacies

Counting Errors

If Eyecon detects objects on the tray that are sufficiently different in size or shape than the pills being counted, a counting error screen is shown. A pill tray photo displays the object(s) in question identified by a red plus sign.
