Medicine·On·Time®

Company Background

Medicine-On-Time, part of CSS Health, improves population health through automated, customizable medication management. CSS Health's unique combination of technology, personal engagement, and proven processes helps health plans, pharmacies, and partners to simplify complex medication regimens, manage costs, and improve lives.

Product Overview

Medicine-On-Time serves a wide variety of pharmacy and facility clients with integrated software, superior multi-dose packaging, robust workstations, and automation options that enable pharmacies to expand business and improve patient care. Medicine-On-Time solutions simplify and synchronize prescriptions through detachable dose cups or color-coded blister packs containing the exact medications that each patient needs, individually marked with name, contents, and the precise time to take them. Clear labeling including patient photograph and easy-to-follow color-coded cards ensures proper treatments. Human and app-based patient follow-up helps document and support adherence.

MOT Software (MOTNext)

MOTNext software is a robust, feature rich, work flow software designed to handle the most complex medication regime. More importantly, the ability to interface with most pharmacy management systems in use today provides pharmacies the confidence that MOTNext can be efficiently integrated into your pharmacy business. Whether your patients are living at home, in assisted living, group homes, adult day care and home bound, developmental disability facilities, or children at summer camp MOTNext can manage medications in all scenarios.

MOT provides all common charts and forms including: MARS, TARS, observation records, delivery manifests, physicians order sheets, PRN and control substance logs, and many more. There is no more complete medication adherence system available in the market today. Built to today's development standards and interfaced to most pharmacy management systems, MOTNext is your avenue to success in the growing medication adherence market.
