The SynMed® System by Synergy Medical - The Automated Alternative

SynMed® is an automated robotic system – the perfect solution for the preparation and dispensing of multi-dose blister packs. Multi-dose blister packs organize patients' pills according to daily dosing times, freeing them from systems like multiple medication bottles and numerous single medication cards.

Company Background

Synergy Medical is devoted to manufacturing and marketing the automated robotic SynMed® System. The first SynMed® robot was developed and put into service in January 2008, created from a combination of proven robotic science, stringent pharmaceutical standards, and truly innovative research and development. Almost 100 units have since been installed in a variety of environments across North America. From independent retail pharmacies to nurse-staffed assisted-living facilities to large centralized production centers that cater to thousands of patients, all SynMed® pharmacies have seen substantial, yet secure growth thanks to the system.

Market Overview

What has surefire appeal to an aging clientele dealing with the daily challenge of a multiple-medication regimen? A way to give them all their prescription drugs pre-grouped by day and time. SynMed® allows medication to be blister packed by the day, and even by the hour, with clear and precise information that allows patients, loved ones and caregivers to ensure medication is taken exactly according to pharmacist instructions. Studies show that having medication dispensed in time-specific packs leads to increased medication adherence and persistence.

Product Overview

The SynMed® System automates the preparation of medication within a blister pack, eliminating repetitive tasks while reducing control and verification time.

SynMed® automates the selection, counting and distribution of medication into blisters at a pace of up to 55 doses per minute.

Multiple visual markers and information printed on the blister packs make verification fast and easy.

Product Benefits

- a. Speed: Save time and effort
- b. Efficiency: Reduce errors
- c. Accuracy: Expand your business safely

More Information

To learn how your pharmacy can benefit from the SynMed® system, contact Michel Guerra by e-mail at Michel.Guerra@synmedrx.com, or call him at (514) 999-2252.
