Company Background

RxSafe began operations in 2008. Many of the principal employees have been innovating together since the early 90's at companies such as Pyxis, Omnicell, and DDN where they have extensively contributed to the advancement of automation in the pharmacy industry. RxSafe's founder and CEO, William Holmes has authored over 50 U.S. patents.

Product Overview

Join the other independents, chains, hospitals, clinics, military, and institutional pharmacies that have selected RxSafe automation in the quest for a better pharmacy.

Technology sets our automated strip packager apart. The RxASP line includes four models offering up to 1,000 smart canisters that take oral solid packaging to a whole new level. Our easy-to-use universal canister means there are no more trays or remote filling stations.

Our RxSafe 1800 is the leader in automated, high-density robotic storage and retrieval of stock bottles. It represents an evolutionary leap in pharmacy automation technology because it goes beyond drawer-based systems. Unlike vial filling robots that hold a small percentage of your formulary, a 3-tower RxSafe system can hold virtually all of your oral solid stock bottles.

When you're busy, the RxSafe 1800 system really shines. Users report that a single operator can routinely fill at an effective rate of over 100 scripts per-hour. If your space is tight, or there's better use for the space, RxSafe is the solution. In a 3-tower system up to 5,400 stock bottle containers fit in 40 square feet of space.

Features & Options

■ RxASP 20 and RxASP 1000

The RxASP line breaks all the barriers of past strip packagers. Designed with the most versatile "hi-fidelity" pouch printing and the easiest to open pouches, it has the highest speed in the industry and the lowest operating cost. What really stands out? This is the only strip packager with built-in vision inspection.

Our entry-level strip packager, the RxASP 20™ is the perfect choice for launching your medication adherence program.

It's semi-automated with manual cassette loading, producing up to 50 multi-dose pouches per-minute. No more trays or remote filling stations.

Designed to be modular and scalable, the RxASP line has the smallest footprint of any strip packager on the market. In fact, the RxASP 1000™ replaces 10 automatic strip packagers in half the space.

RxSafe provides you with a complete package to guide your patients to 100% adherence. Seven years in development, RxEnsure™ is an additional level of assistance for your patients — outperforming anything on the market.

■ RxSafe 1800

Accuracy. Efficiency. Security. With only one technician and one pharmacist, virtually every pharmacy, every day can fill all prescriptions without extra filling staff. And, with one open bottle at a time, there's less chance for error, no wasted inventory, no narcotics theft. In fact, the RxSafe 1800™ is so secure its been approved by the U.S. Department of Defense for C2 narcotics storage.

With the RxSafe 1800, inventory is 100% accurate because it stores stock bottles behind locked doors and forces workflow at one station without the added expense of other software or hardware.

Remote Stock Management is another standard feature of the RxSafe 1800. All pharmacy inventory is managed by the system whether it's inside or outside the RxSafe. No more audits. No more overstocking or wasted inventory.
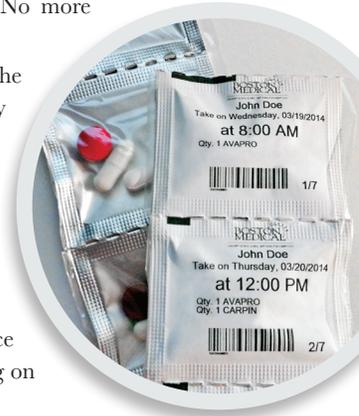

Testimonial

"Our primary goals for making this automation investment were to increase our workflow and inventory management efficiency so we could free up staff to spend more time and attention on clinical services and other revenue generating activities."

— Eric Black, R.Ph., Owner, Mt. Vernon Medicine Shoppe
