Company Background

Helmer Scientific is a manufacturer and worldwide distributor of cold chain storage and processing laboratory equipment. We have over 37 years of experience in providing high-quality temperature controlled environments, with our products being used in more than 125 countries throughout the world. Helmer originated in the blood bank market where precise temperature control is essential to the successful storage and transfusion of products. These same principles have been applied to the design and development of our pharmacy products.

Product Overview

The introduction of USP 800 will have a large impact on clinical pharmacies. Refrigerated HDs must be stored in a dedicated refrigerator. They must also be stored in a manner that prevents spillage or breakage if the container falls.

Helmer Scientific has been focused only on medical-grade refrigeration products since 1977. Our pharmacy refrigerators maintain superior temperature uniformity and consistency through the use of air-cooled, forced air circulation, which allows air to circulate throughout the entire chamber without blowing directly on stored product. The uniform temperature allows the use of all storage areas within the refrigerator, maximizing the usable space.

Pharmacy upright and undercounter refrigerators include roll-out baskets with raised front lips, and side and rear guards, perfect for securing hazardous drugs. Pass-thru models include both stainless steel drawers and shelves, offering spill containment and easy visibility.

A full line of pharmacy refrigerators is available including 4 cu ft undercounter refrigerators which are designed to fit under ADA compliant counters, single and double-door upright models, and single and double-door pass-thru models. We offer Pharmacy models in both the i.Series® and Horizon Series™ product lines.

Features

■ Superior Chamber Temperature Uniformity

Stable temperatures and quick recovery are achieved with a heavy-duty, forced-air refrigeration system. Consistent temperature throughout the cabinet ensures hazardous drugs are stored within the proper range and that all storage space can be fully utilized.

■ Dry Storage Environment

Did you know that many refrigerators have high humidity levels inside the cabinet? This can lead to degradation of medication labels and packaging. Helmer Scientific prevents this problem with reduced humidity levels designed specifically for drug storage.

■ Configurability

Customize your storage for additional protection and user convenience. Stainless steel drawers provide spill containment for hazardous drugs while locking drawers offer secure separation. Additional options include shelves and roll-out baskets.

■ Advanced Alarm Monitoring

i.Series® models feature the i.C3® User Interface which offers constant temperature monitoring and control, access to multiple information logs, on-screen event acknowledgement for corrective actions, and downloading via a full-color touchscreen.

Horizon Series™ models include an integrated alarm monitor with visual and audible temperature alarms.
