Company Background

DOSIS® products by Manchac Technologies are designed to enhance efficiencies in your pharmacy. Our products enhance your pharmacy to fill blister type products, as well as manage the workflow and sorting for all your pharmacy's prescriptions. Led by Randall Murphy and Monroe Milton, Manchac was founded by veteran pharmacy automation engineers, and has over 150 years of collective industry experience. Manchac will continue to leverage their team's talents and skills to lead an ever-growing pharmacy market serving long-term care and assisted living facilities, while expanding into other pharmacy markets.

Product Overview

Manchac is focused on pharmacy automation solutions that provide true benefit to pharmacies servicing long-term care, institutional, and correctional facilities. All of our robotic automation products focus on five critical points that separate our solutions from other industry providers.

Hands-Free: Each system automatically fills, seals, and where applicable, labels medication blister card prescriptions.

Seamless Integration: Connecting directly to your pharmacy management software, our products are used for filling daily/on-demand and cycle prescriptions.

Rules-Based: Rules are predetermined so that our robotic solution fills the prescriptions as your filling technicians would, with the bonus of working after hours.

Small Footprint: Each of the robotic products occupy the minimum amount of floor space compared to our competitors. This allows us to fit into any size pharmacy so that our value per square foot is unmatched.

Affordable: All of our solutions can be easily justifiable based on your pharmacy pain points. Let us work with you to achieve your production and financial goals!

Features & Options

■ Single Medication Solutions

The L60 robot fills the traditional blister (bingo card), typically containing a 28/30/31 medication day supply. The output of the L60 is patient labeled and ready to deliver to your customer. The L60 is the most flexible, single-medication automation on the market, handling calendar filling and skip dosing, as well as splitting out "day packs." The C60 robot fills a half-card, which is a 15/16-day supply often used for schedule two to four medications or short-cycle filling scenarios.

■ Unit Dose Medication Solutions

The U60 is a fully automated, single medication packaging robotic solution. Within the robot, for each card produced, each individual blister cup is labeled on the back of the card. For example: drug name, manufacturer, lot number, and expiration date can be applied to each pill location/cup. For many states that allow reclamation, the U60 is the best solution. U60 is the latest addition to the DOSIS automation suite.
