Company Background

Talyst is engineering the safer pharmacy. The company was founded in 2002 to provide automated medication management systems to acute care hospital pharmacies. The following year, Talyst launched AutoPharm®, the innovative software platform designed to drive a complete suite of medication storage, packaging, refrigeration, and barcoding hardware.

As of 2010, Talyst has installed automated systems in more than 500 acute care hospitals, integrated healthcare companies, long-term care facilities, and correctional institutions. Talyst is dedicated to delivering Enterprise-class software and proven hardware components to enhance efficiency, provide greater inventory control, and improve patient safety in all care environments.

Product Overview

InSite™ Remote Dispensing System by Talyst is designed to ensure you're compliant to 14-day or less dispensing. It enables timely, pharmacist-approved, on-demand medication dispensing right at the facility. The secure, freestanding InSite Dispensing unit is housed at the facility to provide 24/7 medication availability.

Its accurate automated technology can quickly dispense pharmacist-approved medications at the facility before each medication pass and on-demand to facilitate new residents, STAT orders, first doses, and PRNs. InSite reduces delivery runs, medication fill-time, pharmacist's check-time, and medication waste.

Talyst's complete automated dispensing solution includes a central fill model. The InSite Central Fill Dispensing System offers pharmacies centralized automated dispensing, a technology that Talyst has used in hundreds of pharmacies. Central fill dispenses automated multi-dose patient specific medication packages in 7-day, 3-4 day, or 2-2-3 day cycles. The central fill model reduces medication waste and nurses' time administering medications.

Additional Product Lines

AutoPharm®, AutoLabel®, AutoCarousel™, AutoPack™, AutoCool™, AutoSplit® 340B
