Company Background

H+H System, Inc. has been providing the healthcare industry with storage solutions in the United States for over 20 years. Our products are now distributed in more than 50 countries either directly or via our partners. H+H System is now used by a large range of people from the healthcare sector to shop fitters of all types of businesses. We work with pharmacy, anesthesia, operation, and emergency room personnel to ensure they have the specific storage solution they require. The original concept of flexible storage dividers has now been incorporated in our shelving, FlexModul, and FlexShelf product lines.

Product Overview

Our family of H+H System products organize your inventory and help with workflow efficiency. Flexible storage systems can be adapted to changing inventory needs. Labeling options are available to help with inventory counts and product expirations. The H+H System brings the standardization, security, and control that the joint commission expects! The H+H System offers shelving organization for pharmacy stock, (movable) shelves, nursing stock, bulk storage, and unit dose storage. Sliding dividers provide a place for everything and keep everything in its place. Dividers and attached label holders slide into position along with stock. Compact storage assures instant recognition of missing items and guarantees:

- Clear visibility, easy access, and better security.
- Increased efficiency of inventory and restocking.
- Improved accuracy and reduce risk of med errors.

Additional Product Lines

■ Picking Stations and Work Stations

New for 2016 are the H+H System picking stations and work stations. Picking stations organize and simplify the restocking of drugs for your exchange trays. By having the storage of items (both small dosages and bulk) in close proximity to the work surface, increased efficiency is achieved. Different height trays with customizable divider configurations allow the picking station to fit your specific needs. Our work stations, with an IT Configuration or work top, are ideal compliments for your scanning stations.

■ Exchange Trays

H+H System exchange trays give hospital personnel the ability to standardize their medication storage in all medical carts and drawers. Standard heights include 1 $\frac{3}{8}$ ", 2 $\frac{5}{16}$ ", 4", and 5". Standard size trays are available, but custom sizes can be produced for any quantities. Flexible dividers on the inside of the tray allow the end user to compartmentalize the tray based on their needs. If the need for more storage space arises for a particular item, just slide the divider and a larger storage compartment is now created. Trays can be produced in different colors, which allow it to be quickly identified for different hospital departments.

■ FlexModul

The FlexModul product line is designed to give the user ideal storage for bulk goods. Our side panels can be mounted inside an existing casework and allows the trays to be hinged 10 or 30 degrees for viewing while still being stored horizontally. This allows for the storage to be optimized in the existing space. Trays are available in 2", 4", and 8" heights in either gray ABS plastic or clear polycarbonate plastic. FlexModul dividers can be added to the inside of trays to further divide the space. Labeling options are also available so the items are easily and quickly identified.

■ FlexShelf

FlexShelf is an expandable open rack storage system that allows for products to be stored in a viewable manner. When accompanied with the FlexModul trays, the system can be adjusted as your storage needs change. Accessories such as fixed shelves, pull-out shelves, pull-out drawers, and solid worktops allow for numerous configurations and the perfect solution for any need. Additional storage columns can be added at any time, as needed. For a mobile storage option, castors can be used instead of the adjustable leveling feet. This can be used as a distribution cart when restocking exchange trays on your medical carts.
