chemocato®

Product Overview

Chemocato is a Well Proven System

It has been on the market since 1999 and today the software is used by more than 150 major hospitals in 12 different countries. The software solutions are developed in close cooperation with the customers. Chemocato® is a highly specialized modular software system primarily intended for chemotherapy but it can be used for any patient individually prepared medication. The software supports the entire workflow of chemotherapy; it is used by the physician for planning and online ordering based on predefined or customized regimens, in the pharmacy for validation and compounding, and by the nurse for administration.

Chemocato offers unsurpassed safety and precision in the compounding process of cytotoxics and other patient individual medications. By utilizing bar coding for product and patient identification and an electronic scale in the safety cabinet only Chemocato makes sure that the right amount of the right drug goes to the right patient.

Additional Product Lines

The company will soon introduce a new TPN software for the US market. All solutions are developed in close cooperation with hospital users. Among its customers the company group enjoys an excellent reputation for service and support. The software solutions can be integrated easily with third party vendor software. Chemocato LLC has significant expertise with HL7 interface solutions.

Benefits

Chemocato® supports the physician and the pharmacist in a variety of ways, such as:

- Automatic dose calculation and dose monitoring based on the patient's data and lab values
- Automatic documentation of all therapy relevant data e.g. dosage modifications
- Automatic warnings (e.g. cumulative/maximum single dosage, dose modification based on labs, etc.)

Ordering Information
