Company Background

Helmer is a manufacturer and worldwide distributor of cold chain storage and processing laboratory equipment. We have over 35 years of experience in providing high-quality temperature controlled environments. Our products are used in over 100 countries throughout the world. Helmer originated in the blood bank market where precise temperature control is essential to the successful storage and transfusion of products. These same principles have been applied to the design and development of our pharmacy products.

Product Overview

Pharmacy refrigerators feature 6 roll-out baskets and 1 shelf. However, with Helmer that's just the beginning. Choose from our selection of shelves, half-shelves, bridge shelves, drawers, roll-out baskets, and multiple storage trays to create a storage unit that is unique to your storage needs.

Bridge shelves span the existing shelves in double door models to create additional storage space and maximize capacity in the same footprint. Storage trays and dividers can be used in drawers, baskets or shelves and keep items such as medications organized and easy to dispense.

These storage options provide quality solutions for organization, promoting error reduction and patient safety. Whatever your need may be, there's no reason to look further when you can "store it your way" with Helmer.
