Company Background

Talyst, founded in 2002, helps pharmacies enhance efficiency, provide greater inventory control, and improve patient safety by delivering enterprise-class software and proven hardware components that increase efficiency, lower costs and deliver better patient care. As of 2010, Talyst has installed automated systems in more than 500 acute-care hospitals, integrated healthcare systems, long-term care facilities, and correctional institutions. The company strives to “engineer the safer pharmacy.”

Product Overview

AutoPharm® Enterprise, a powerful software platform, manages your inventory across the entire health system. With AutoPharm Enterprise, the central pharmacy can easily order medications from the wholesaler for multiple facilities. Its enterprise wide inventory management system manages multiple medication inventories with one automated system to ensure inventory is on-hand and accurate across the system.

The software platform allows you to manage your complete pharmacy inventory from arrival in the pharmacy to the patient care area. AutoPharm Enterprise integrates with your existing pharmacy and information systems to improve the way you stock, manage, and track medication inventory. It enables barcode-driven pharmacist checks for improved patient safety and easier, more accurate recordkeeping. AutoPharm Enterprise provides broader high-alert medication warnings, and improves overall medication management.

Product Specifications

■ Safety

- Provides controls and checks for high-alert and pediatric medications
- Allows multiple barcode checks to receive, dispense and restock medications
- Works with barcode medication administration (BCMA) systems and automated dispensing units (ADUs)
- Supports and integrates with automated packaging and labeling to barcode virtually 100% of your medication doses
- Auxiliary labeling system for special instructions related to medications
- Supports lot number tracking for manufacturer recalls

■ Control

- Enables tracking and management of real-time, perpetual inventory
- Enables centralized ordering and inventory management to optimize on-hand inventory across the health system
- Supports multiple pharmacy locations for more accurate communication and dispensing
- Supports web-based ordering from remote departments or hospitals
- Flexible security with role-based permission
- Supports management and control of crash carts and other medication trays

■ Efficiency

- Perpetual inventory tracking and management for multiple locations
- Works with centralized or decentralized pharmacy distribution models
- Automates receiving, restocking, dispensing, and returns for more efficient workflow
- Optimizes automated dispensing unit replenishment and cart fill activities
- Supports integration with existing pharmacy information systems
- Supports integration with existing wholesaler for automated order processing
- Simplifies inventory adjustments and expiration date tracking
