Company Background

Total Pharmacy Supply, Inc. is a wholesale distributor of pharmacy supplies and health care products to pharmacies worldwide. Our product lines include prescription packaging, compounding equipment and supplies, store supplies and home health care items. Our goal is to be a complete, or total, supply source for retail, compounding, infusion and long term care pharmacies.

The company was founded in 1989 by Stan and Cindy Moses, who own and operate it today. TPS was one of the first in the industry to establish a presence on the World Wide Web with the introduction of its Internet site in 1997. Online ordering was incorporated in 2001.

Continuous growth and expansion of product lines necessitated the acquisition of larger warehouse and office facilities in 2004. The increase in space also provided opportunities for implementation of innovative warehousing programs, tailored to meet the specialized needs of specific customers and vendors.

Today, we remain committed to the mission and values that have guided the company from the beginning.

Product Overview

The Capsule Polisher & Finisher works by vibrating the capsules and shaking excess powder from the exterior of capsules to the bottom of the vessel, giving a clean and professional end product. Features include a clear cover to enable viewing during operation and a unique Powder Screen Kit. This screen allows powder to pass through to the bottom of the bowl, while keeping capsules suspended - leaving them cleaner than before. The powerful motor works quickly and efficiently on small or large batches. Cleanup is easy - just remove the wing nut and lift off the drum. The durable plastic drum may be washed by hand or in the top tray of a dishwasher.

Product Features

- 110 volts AC
- Fast cleaning action
- Powerful motor for great performance
- Convenient ON/OFF switch on cord
- Clear lid allows you to see the cleaning progress
- Convenient wing-nut allows you to quickly remove and replace the lid
- Unique mesh screen ensures capsules remain suspended while allowing powder to filter through to the bottom of the bowl
