

A large, semi-transparent RIVA logo is positioned in the upper left corner of the image, partially overlapping the pharmacy equipment.

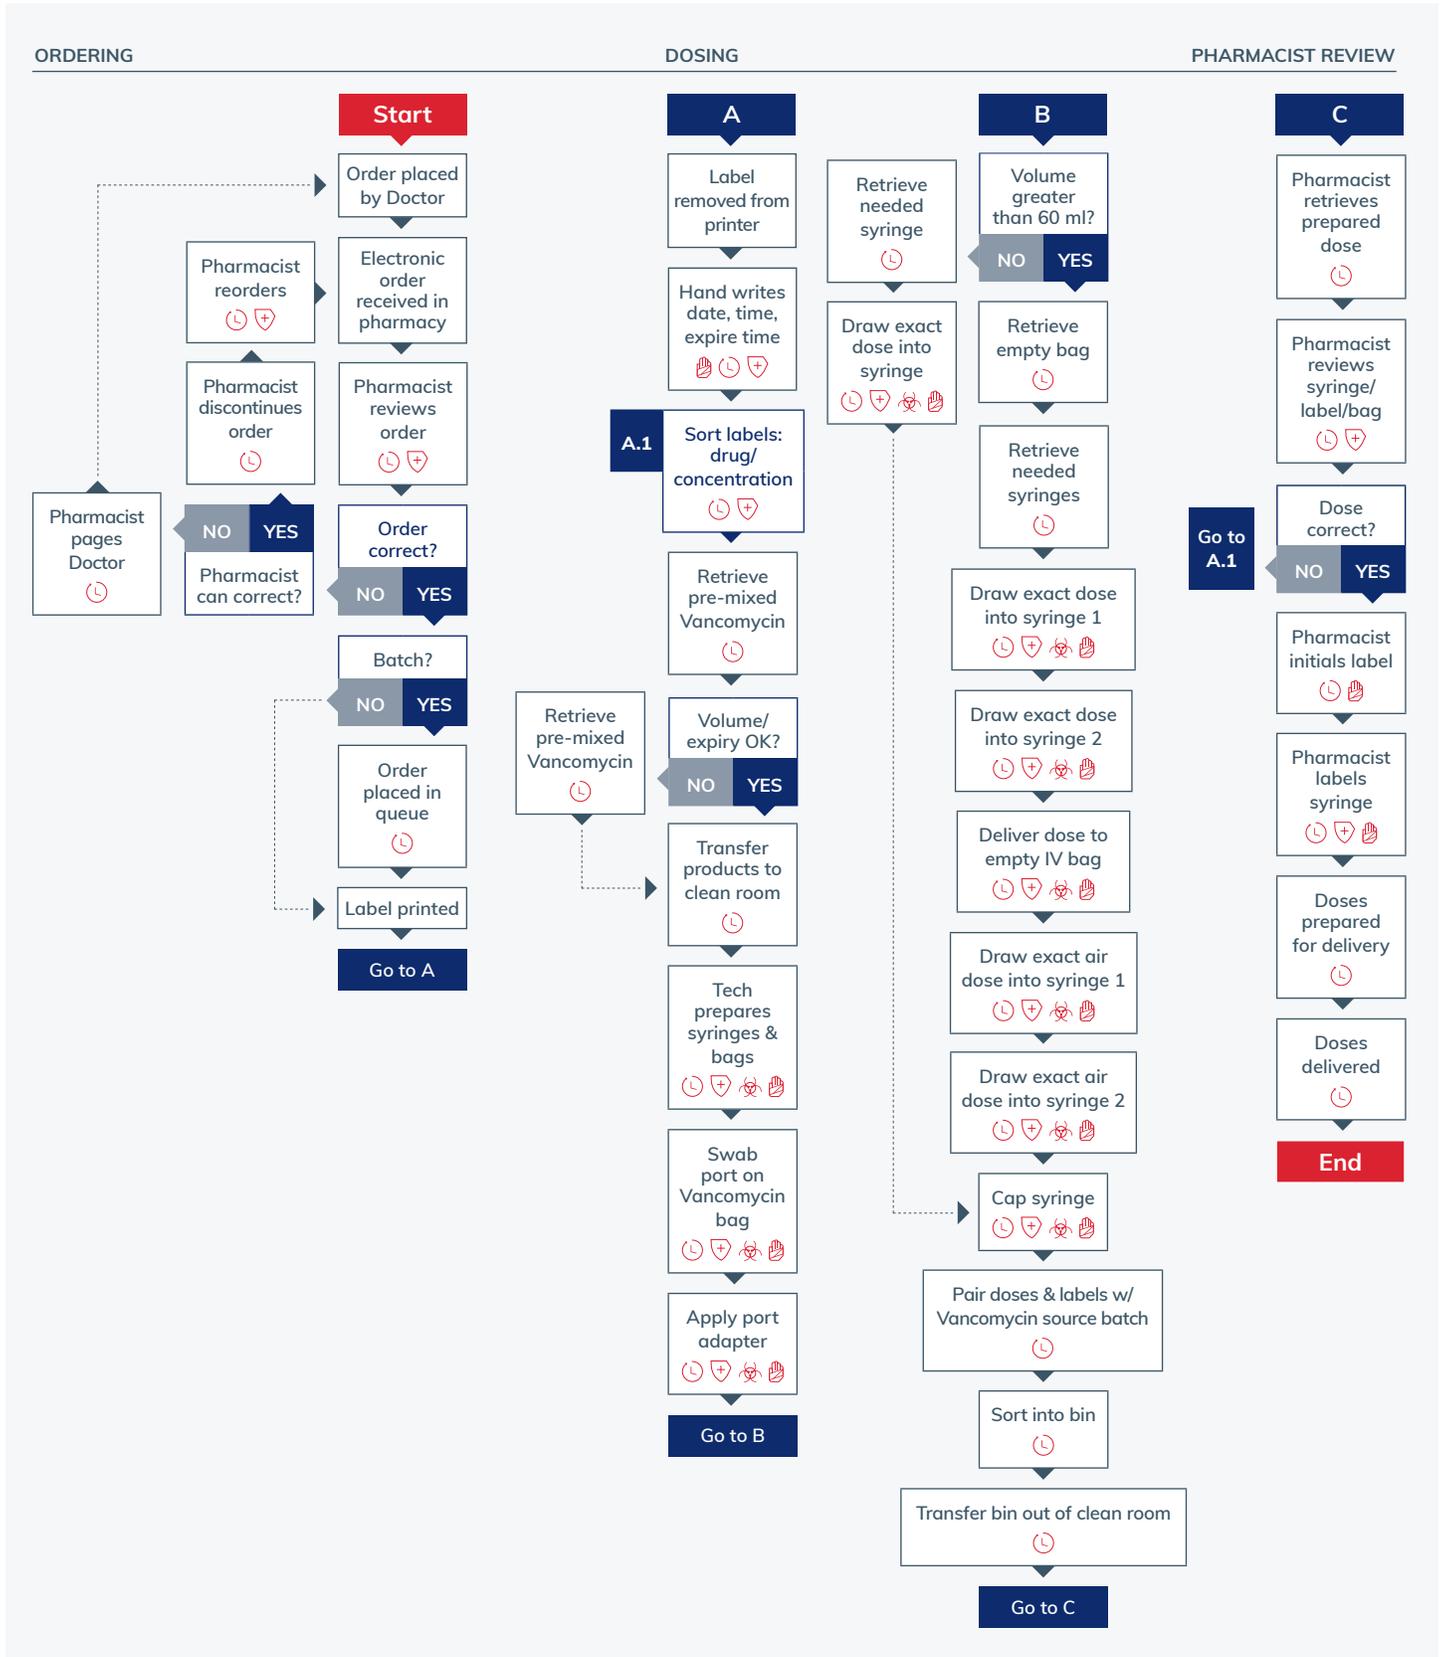

**CASE STUDY**

The impact of RIVA's pharmacy automation technology on ordering, preparing and reviewing a single dose of Vancomycin.

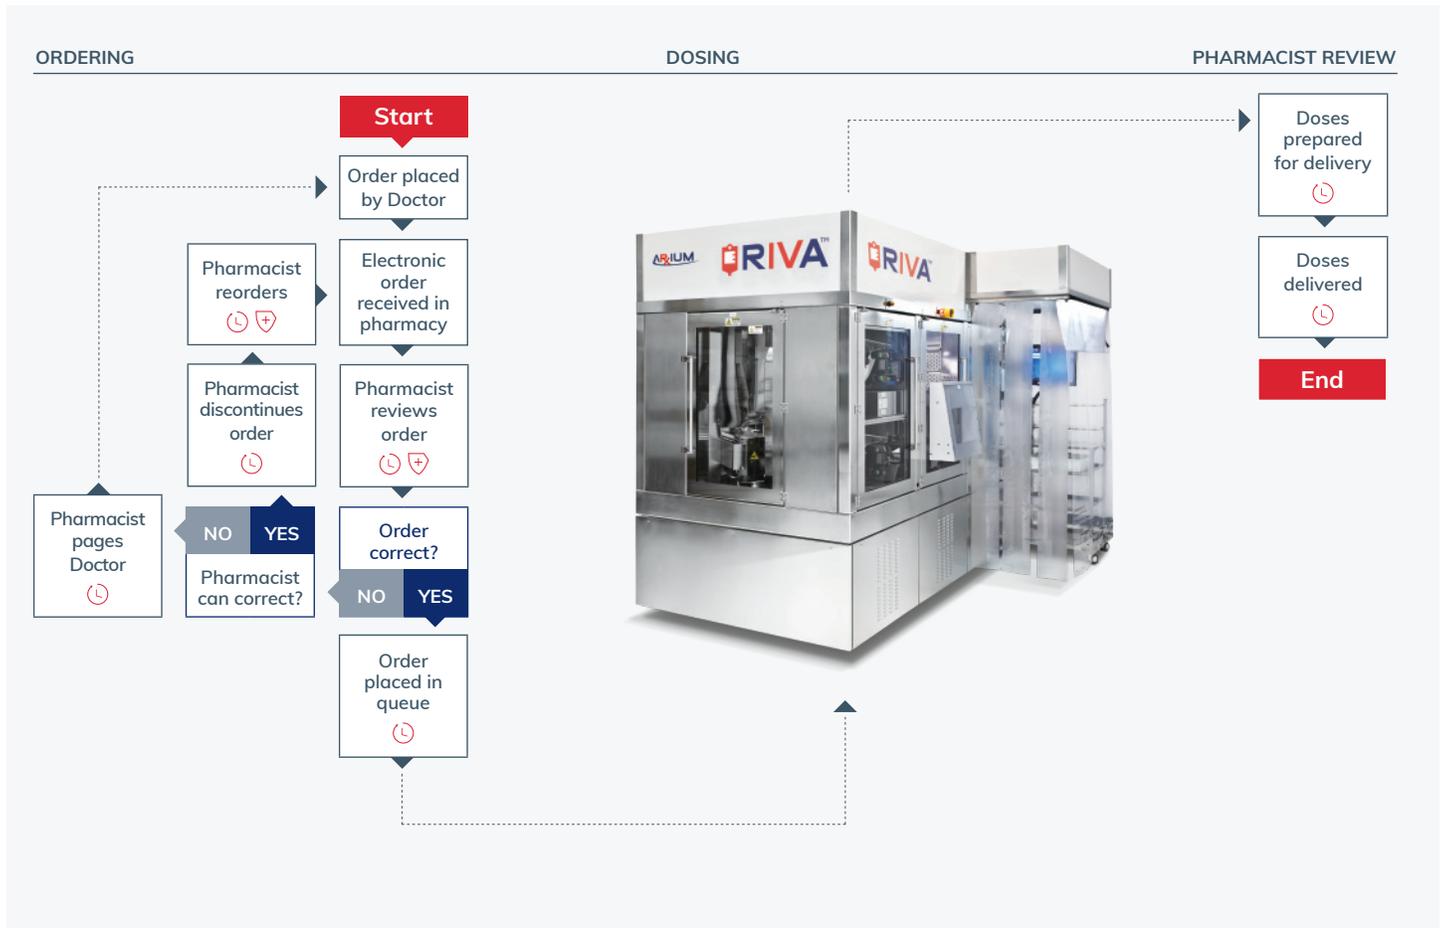

## Manual Medication Preparation

Involves multiple steps and processes, increasing the risk of error and contamination. The need for checks and re-checks requires time and expense, and delays delivery of completed doses to patients.

## Automated Medication Preparation with RIVA

Eliminates all steps in which there is a risk for contamination, as well as those where errors are most likely to cause patient harm.

KEY			
 Process Wait Time	 Patient Safety	 Bio Hazard	 Repetitive Motion Injury

RIVA is a fully automated IV compounding system designed to address the issues of patient and pharmacy technician safety, overall efficiency and the challenges of an ever-changing regulatory environment.
